

# SPECIFIED AIRPORT SERVICES ANNUAL INFORMATION DISCLOSURE FOR THE YEAR ENDED 31 MARCH 2016

### **Executive Summary**

### 1. Introduction

Wellington International Airport Limited (WIAL) provides its annual information disclosure and reporting of financial and service quality outcomes (Annual Disclosure) for the year ended 31 March 2016. This is WIAL's sixth Annual Disclosure under the Commerce Act information disclosure regime (ID Regime) which commenced following the publication of the Commerce Commission's Information Disclosure Determination in December 2010 (Determination).

WIAL recognises that the purpose of information disclosure, as provided in the Commerce Act (Act), is for WIAL to provide sufficient information to enable interested persons to assess WIAL's performance over time and in comparison to Auckland International Airport Limited (AIAL) and Christchurch International Airport Limited (CIAL).

The Annual Disclosure reports the historic or past results for WIAL. This disclosure should be read in conjunction with WIAL's Price Setting Event Disclosures for its current pricing period 1 June 2014 to 31 March 2019 (PSE3). These disclosures set out the forecasts and assumptions applied to determine pricing for PSE3. WIAL considers that any assessment of airport performance should consider both past and forecast returns. Furthermore, WIAL's view is that airports are long-term cyclical assets and as a result analysis should be based on a time series of data rather than any one period in isolation.

WIAL has also taken the step this year to prepare a separate regulatory performance summary, which accompanies, but does not form part of, the Annual Disclosure. This summary assesses WIAL's performance since the start of the ID Regime and considers all four limbs set out under section 52A of Part 4 of the Act. WIAL considers that any assessment of airport performance, in particular promoting the long-term benefit of consumers, is best achieved by a contextual review which considers service quality, efficiency, pricing, innovation and investment, rather than a narrow focus on profitability.

WIAL considers that the ability of the Commerce Commission (**Commission**) and interested persons to assess WIAL's performance will improve over time as further information disclosures are published.

### 2. Commission's Input Methodologies Review

The Commission is currently undertaking its statutory review of the input methodologies (**IMs**), an integral part of the ID Regime. As part of this review, WIAL is submitting to the Commission on improvements to the regime. These include:

- → A move toward a more contextual assessment of airport performance as opposed to a narrow de facto price control focus and assessment of profitability
- → The ability for airports to explain their performance and provide justification for their targets
- → Increased flexibility to reflect pricing decisions within the ID Regime

→ Explaining to interested persons the uncertainty and flaws of the capital asset pricing model (CAPM) weighted average cost of capital estimate used by the Commission in its assessments

The Commission's review is due to be completed by the end of 2016.

## 3. WIAL's Role in Promoting Economic Growth

WIAL is seeking to deliver world class service and quality to its airline partners, customers, and the many businesses and agencies that work at the airport. WIAL's success is intertwined with the Wellington region's growth and economy.

To further this growth WIAL is investing in promoting airline services, and in the appropriate infrastructure that provides quality facilities at prices that represent value for money.

The 2016 year experienced exceptional passenger growth with domestic passengers increasing 4.7% and international passengers increasing 15.8%. This growth in passenger traffic in 2016 has been beneficial, not just to the airport, but to the wider Wellington region.

WIAL has invested significantly in route development with airlines and four new international services from Jetstar, Fiji Airways, and Qantas were successfully launched and a new Singapore Airlines service was also announced. The strong and sustained demand for Wellington's international services and the addition of 160,000 annual seats from the new services has delivered unprecedented international growth of almost 16% for the year. The growth is expected to continue with the much anticipated arrival of wide body services with Singapore Airlines flying between Wellington, Canberra and Singapore from September 2016. The Boeing 777 service will add 110,000 seats and is estimated to deliver a \$95m increase in visitor spend to New Zealand.

Domestic passenger growth is traditionally steady at around 3%, but was up 4.7% for the year with the up-gauging of Air New Zealand aircraft and regional competition from Jetstar, including new routes from Dunedin and Nelson to Wellington. Sounds Air has grown into a material regional player with five routes and 100,000 seats annually.

WIAL considers that airports have a significant role in developing a region's connectivity and growth, and in fostering airline competition, and is continuing to invest in infrastructure and airline growth with this in mind.

### 4. Return on Investment

WIAL's actual return on investment is set out in Schedule 1 of the Annual Disclosure. The return over the last six years has been as follows:

Year	WIAL's Post Tax Return on Investment	WIAL's Return on Investment excluding Revaluations	Commission's 75 <sup>th</sup> percentile Cost of Capital Published for WIAL	Impact on Revenue per annum	Cumulative Impact on Revenue <sup>(1)</sup>		
2011	6.16%	6.16% 5.14% 9.18%		\$17.2 million shortfall	\$24.9 million shortfall		
2012	6.91%	5.44%	8.73%	\$10.4 million shortfall	\$38.9 million shortfall		
2013	6.23%	5.43%	8.04%	\$10.5 million shortfall		· ·	\$51.9 million shortfall
2014	4.18%	6.63%	7.67%	\$19.8 million shortfall	\$74.9 million shortfall		
2015	6.13%	6.05%	8.40% \$12.4 million shortfall		6.05%   8.40%   '		\$88.3 million shortfall
2016	9.67%	6.86%	7.69%	\$10.6 million surplus	\$77.6 million shortfall		

<sup>(1)</sup> Shown in 2016 present value terms

The regulatory profit for the year has increased to \$38.4m (2015: \$25.2m profit). This provides a Return on Investment (**ROI**) of 9.67%, or 6.86% excluding revaluations.

The ROI is calculated in accordance with the Determination by dividing the regulatory return, including CPI indexed asset revaluations and revaluations from updated land revaluations, by the regulatory investment value (comprising the commencing asset base plus an allowance for additions and disposals during the year).

As shown in the table above, actual returns for all years prior to 2016 since the commencement of the ID Regime are below the cost of capital determinations released by the Commission for WIAL. The actual return for 2016 is above the cost of capital determination released by the Commission for WIAL for that year, largely due to the revaluation of land assets in 2016. Excluding the impact of revaluations, WIAL's 2016 return is below the Commission's cost of capital determination.

WIAL's accounting policy for property, plant and equipment (PPE) for financial reporting purposes is to revalue these assets at least once every five years. In accordance with this policy WIAL revalued

its PPE in 2016. As a consequence, WIAL has also updated its regulatory land values recorded under information disclosure (ID). Non land values, however, have not been updated for the new valuations, since these assets are not permitted to be revalued under the ID Regime and instead are indexed each year by CPI.

The revenue shortfalls in the table demonstrate that WIAL is not earning excessive profits and has, overall, been earning revenues well below the levels that would be derived from applying the Commission's IMs since the start of ID. The variability in returns over the six year period reflects the wide range of risks inherent in an airport business. Also, the variance between actual and forecast returns demonstrates that the Commission should be cautious in drawing conclusions from targeted returns, and should also consider actual returns.

### 5. Service Quality and Investment

WIAL is committed to providing an appropriate quality of service to all users of its airport services, undertaking planned investment and initiatives to facilitate and promote passenger growth in future years and improve any areas of service or quality as required.

WIAL continually reviews the quality of service it provides to its passengers and customers including commissioning of passenger surveys and through a collaborative decision making approach in meetings with its stakeholders including airlines and government agencies. Service quality improvements are assessed on a continuous basis.

In Schedule 15, WIAL comments on a number of initiatives that have been completed or are currently in progress to deliver further improvements in service quality. These initiatives demonstrate WIAL's achievements and ongoing commitment in the areas of service quality, efficiency and innovation, and are summarised below in the following sections.

### Infrastructure Investment

WIAL is part-way through a \$125 million aeronautical capital expenditure programme, with a number of construction projects underway or in the advanced stages of planning at the time of publication. The live operational environment of an airport requires careful design and management of 'brownfields' construction projects to minimise any interruptions to day-to-day operations and prioritise passenger and staff safety at all times. WIAL is no exception with its constrained footprint requiring innovative approaches to design and construction.

The following major infrastructure projects were under construction during 2016:

The Terminal South Extension (**TSE**) development incorporating a 35 metre (6,000m²) extension of the main terminal to the south, and redesign and expansion of the south and south-west piers is nearing completion. The \$65 million development has widened the width

of both southern piers, added centralised security screening, provided extra gate lounge space, started to increase the retail mix and doubled the number of toilets. The southern apron will also be extended and reconfigured to use the area more efficiently. The TSE works will facilitate passenger growth, providing capacity for up to 1,500 passengers per hour during the peak periods, and enhance their experience.

- The International Arrival Enhancement (IAE) project commenced in March 2016 to address congestion, improve levels of service and cater for growth in international passenger numbers. The IAE project incorporates an increase in space for primary processing, allowing for the addition of two conventional processing counters and five SmartGate+ lanes. The secondary processing area will also be reconfigured to allow for improved queue management and increased passenger throughput. In order to facilitate this additional space the existing toilets, Customs Control Room and VIP room will be relocated. These works will assist in managing the strong growth in international passenger numbers and is complimentary to the longer term plan to develop the international terminal. This project is expected to be completed by the end of 2016.
- The Multi Level Transport Hub project commenced in February 2016 and is scheduled for completion in December 2017. The \$70 million project will create an extra 1,000 covered car parks with electric vehicle charging and way-finding technology. It will also provide improved facilities for passenger drop-off/pick-up and ground transport operations including taxis, buses and bicycles.

### Passenger Experience

WIAL continues to rate highly in its Airport Service Quality (**ASQ**) survey scores, with an average domestic score of 4.1 (2015: 4.1) and an average international score of 4.2 (2015: 4.1). These compare extremely well against other airports around the world and WIAL is ranked the 4th highest airport in Australasia<sup>1</sup> and sits mid-range in its worldwide peer group of airports with 5 to 15 million passengers per annum.

Investments to enhance the quality of the passenger experience include the following:

→ Extra capacity has been added to the public Wi-Fi system so it is now available in the baggage reclaim, international arrivals and the south west pier. Fibre optic cabling is also being rolled out across the airport campus and new beacon technology is being assessed.

<sup>&</sup>lt;sup>1</sup> Source: ACI ASQ yearly ranking Q2 2015 – Q1 2016

- → Improvements have been made to the international arrivals area on the lower level of the main terminal. This has improved passenger flow into the meet and greet area and created more floor space and seating capacity.
- A passenger walkway has been improved outside the northern end of the car park precinct to give staff and passengers safe walking access to and from the eastern suburbs and the airport.
- The terminal is being progressively fitted out with new modern seating.

### Investment in Technology

New airport technologies and innovations continue to influence airport operations and the passenger experience. Wellington Airport is investing in technology in a number of areas to generate efficiencies and improve quality of service.

In addition to the examples noted earlier, two further examples of innovation driven by technology are outlined below:

- The Airport Collaborative Decision Making (ACDM) module within the Gentrack Airport 20/20 system has now been successfully implemented at WIAL. ACDM is a nationwide project with Airways Corporation (Airways), airlines and ground handlers. ACDM is an operational concept that is being advanced by the International Civil Aviation Organisation (ICAO), and is also supported by Airports Council International (ACI) and International Air Transport Association (IATA). ACDM enables aviation partners to work together more efficiently and transparently resulting in operational efficiencies and enhanced traffic capacity. The concept is based upon the key stakeholders sharing operational information (often automatically from existing systems), into a common software platform. It provides all stakeholders with a portal of real time information to enable common situational awareness of aircraft movement across a network. WIAL is the first in Australasia to have both jet and turbo prop services on an ACDM platform. ACDM provides the following benefits:
  - Reduction in aircraft holding patterns, resulting in lower fuel burn (reduced costs and improved environmental footprint)
  - Reduced apron congestion and increased predictability of aircraft movements
  - Improved on-time performance
  - Better slot allocation (more efficient for air traffic control)
  - Provides proactive alerts for staff to better manage daily operations
  - Contributes to an improved passenger experience and improved service levels
  - Cost savings through improved asset utilisation

A Common Use Terminal Equipment (**CUTE**) platform has been implemented resulting in 18 check-in desks, 8 departure desks and 3 arrivals desks being converted to a platform that can be used by all airlines operating at WIAL (with the exception of Air New Zealand who use their own in-house system). The CUTE platform provides increased flexibility at check-in desks and departure gates and is an efficient use of check-in space. The northern check-in area has also been upgraded to provide better signage through the provision of large LCD screens, two-sided counter sliders for information purposes, better lighting and seating for staff and an improved TENSA barrier system for passenger queuing.

### **Operational Excellence**

WIAL continues to consult with its airline customers and other stakeholders on operational matters, with a view to maintaining high levels of service and lowering the cost of operating at WIAL. The TEAM WLG (an acronym for Together Everyone Achieves More) forum continues to operate well and focuses on service reliability, service performance and a review of ASQ results, as well as ACDM as a model for improving passenger and aircraft operations.

Below are examples of innovation and investment that are improving operational efficiency and effectiveness and ultimately lowering the costs for airlines operating at WIAL:

- Wellington Airport operates 27 aircraft stands. All aircraft need to be allocated to a free stand as soon as they land. Previously this task was conducted manually and was reliant on the operational experience of the staff member responsible. In 2016 the Resource Management System (RMS) module within the Gentrack Airport 20/20 application was deployed. Gate allocation is now fully automated with automatic updates and alerts if a manual intervention is required. Aside from moving away from a manual process, the RMS tool enables the airport community to view real-time scheduling of gates and stands (including the solving of allocation conflicts), providing the optimum allocation based on a set of business rules and a graphical Gantt chart display for ease of use. The RMS has provided the following performance and efficiency benefits:
  - Stand allocation fully automated. Only deviations and conflicts require an operator to make a decision, meaning the process is less resource intensive
  - Automatic alerts if there is a conflict in the stand allocation (for example one flight gets delayed and the next flight is waiting on that stand)
  - Gantt chart to visualise the stand allocation for ease of use
- → WIAL has installed a lightning warning and alerting system in and around the airside apron areas during the year. This system will provide stakeholders with visual and audible alerts to provide notification of any lightning activity in the vicinity of the airfield. The alerts enable each

organisation to commence any pre-lightning mitigation activity to protect their staff and equipment. The system will be activated from data received from the Met Service who have developed a cloud based lightning warning system.

- A new type of Nose in Guidance System (NIGS) has been introduced on most jet stands. The NIGS gives information to a pilot parking an aircraft at a precise location on the stand. The unit provides both centre line and stopping guidance. This allows the pilot to remain clear of obstructions and ensures that aerobridges can reach the aircraft. The NIGS units are integrated with WIAL's Airport Operating Data Base (AODB) to provide real-time on/off block times. This information is shared to the benefit of ACDM users.
- The provision of a high quality closed circuit television (**CCTV**) service is considered an essential piece of airport infrastructure for enhancing airport operations, security and safety. WIAL is in year four of a five year plan to migrate all CCTV systems and cameras to the Cisco VSM platform. Coverage of CCTV within the airport campus was also recently expanded and enhanced with more critical back-end storage/redundancy.
- The software components of the baggage handling system have been upgraded to increase its reliability and to add the ability to send alerts to the airport control room as well as providing an improved set of operational reports.

### **Community**

Few cities in the world benefit from an airport as conveniently located to the CBD as Wellington. This accessibility also requires that the effects of airport noise on the local community are carefully monitored and managed. The air noise mitigation or 'Quieter Homes' package to protect residents against future aircraft noise is progressing well, with the live trial on selected properties having been successfully completed. The package is being progressively rolled out to approximately 700 home owners within the air noise boundary, beginning with the properties that experience the highest exposure to aircraft noise.

### 6. Contact Person

In the case of any queries, the contact person for this disclosure is:

Martin Harrington Chief Financial Officer P O Box 14175 Wellington 6241 DDI: 04 385 5105

### Disclosure Template Guidelines for Information Entry

Internal consistency check

OK

### Templates

The templates contained in this workbook are intended to reflect the specified airport disclosure requirements set out in Schedules 1–17 inclusive and Schedule 23 of Commerce Commission decision 715 (Commerce Act (Specified Airport Services Information Disclosure) Determination 2010).

### Data entry cells and calculated cells

Data entered into this workbook may be entered only into the data entry cells. Data entry cells are the bordered, unshaded areas in each template. Under no circumstances should data be entered into the workbook outside a data entry cell.

In some cases, where the information for disclosure is able to be ascertained from disclosures elsewhere in the workbook, such information is disclosed in a calculated cell. Under no circumstances should the formulas in a calculated cell be overwritten. All cells that are not data entry cells may be locked using worksheet protection to ensure they are not overwritten.

### Validation settings on data entry cells

To maintain a consistency of format and to guard against errors in data entry, some data entry cells test entries for validity and accept only a limited range of values. For example, entries may be limited to a list of category names or to values between 0% and 100%.

### Data entry cells for text entries

Data input cells that display the data validation input message "Short text entry cell" have a maximum text length of 253 characters. Because of page layout constraints, this text length is unlikely to be approached. The amount of text that may be entered in the comment boxes is restricted only by the capacity of the spreadsheet program and page layout constraints. Should a comment box within a template be inadequate to fully present the disclosed comments, comments may be continued outside the template. The comment box must then contain a reference to identify where in the disclosure the comment is continued. Row widths can be adjusted to increase the viewable size of text entries

A paragraph feed may be inserted in an entry cell by holding down both the {alt} and the {shift} keys.

### Data entry cells that contain conditional formatting

A limited number of data entry cells may change colour or disappear from view in response to data entries (including date entries) made in the workbook. This feature has been implemented to highlight data being entered that is not internally consistent with other data currently entered, and to hide data entry cells for conditionally disclosed information when the determination does not require the data be disclosed.

### a) Internal consistency checks

To assist with data entry, the shading of the following data entry cells will change if the cell content becomes inconsistent with data elsewhere in the template:

Schedule 4, cells N110:N118, J30; Schedule 7, cells K8:K14, K16:K18, K20, K22, K24, K26, K28, K30, K32.

Should such inconsistency be identified, the shading of the internal consistency check cell C4 at the top of the Guidelines worksheet will also change and the check cell will show "Error" instead of "OK".

### b) Conditionally disclosed information

The determination allows in some circumstances that data do not need to be disclosed. Accordingly, the following cells are conditionally formatted to disappear from view (the borders are removed and the interior of the cells takes on the colour of the template background) in some circumstances Schedule 1, cells F9:F12, F14:F15, F17:F18, G9:G12, G14:G15, G17:G18;

In schedule 1, the column F cells listed above disappear if the determination does not require Part 4 disclosure in respect of year CY – 2 (CY is the current disclosure year). Similarly, the column G cells disappear if disclosure in not required in respect of year CY – 1.

### Schedule 6 comparison of actual and forecast expenditures

Clause 6a of schedule 6 compares actual expenditures with expenditures forecast in respect of the most recent price setting event.

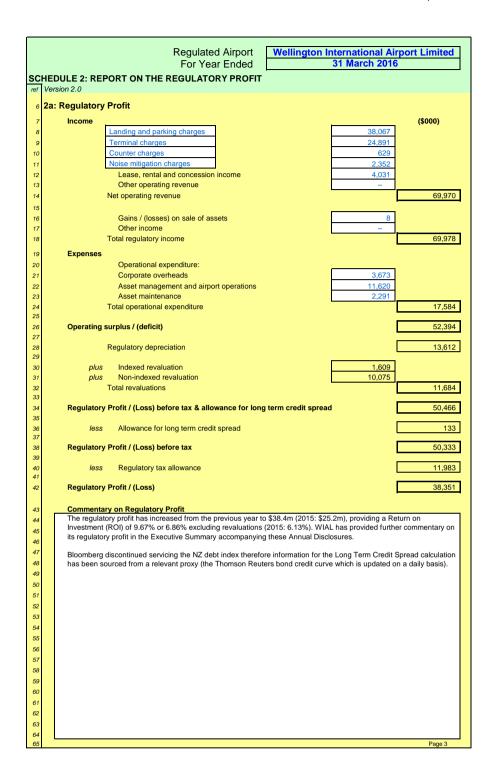

The calculated cells G10:G11, G14:G16, G19:G28 determine, from clause 6b, the forecast expenditure for the current disclosure year.

The calculated cells M10:M11, M14:M16, M19:M28 determine, from clause 6b, the forecast expenditure to date.

The formulas in the calculated cells assume that the current disclosure falls within the five year pricing period. Cell C65 notes which of the pricing period years disclosed in clause 6b coincides with the current disclosure year.

28	* Workings	to be provided	
29	3b: Notes	s to the Report	
20			
30	3b(i): [	Disclosure of Permanent Differences and Temporary Adjustments	
31		The Airport Business is to provide descriptions and workings of items recorded in the four "other" categories above (explanatory ne	otes can be provided in a separate note if necessary).
32	i		
33		The tax adjustments/differences detailed in Schedule 3 were determined as follows:  Other permanent differences - not deductible - 50% of entertainment expenditure is non-deductible expe	enditure for tax purposes and this adjustment
34		represents the allocated share of the total non-deductible expenditure in WIAL's 2016 tax return. Entertail	
35		cost base following application of the cost allocation processes detailed in Schedule 10. The aeronautical	
36 37		tax adjustment in WIAL's tax calculation schedule for the 2016 financial year - comprising a company cost	t of \$49,893 multiplied by a 67.59% aeronautical
38		<ul> <li>share of this expense.</li> <li>Other temporary adjustments current period - these comprise year end accruals for human resource cos</li> </ul>	sts (annual leave, bonus provision and ACC levies)
39		that are not deductible in the year they are accrued. These amounts represent the amounts allocated to the	
40		accrual of \$1,079,145 multiplied by a 74.92% aeronautical share of this expense.	
41		<ul> <li>Other temporary adjustments prior period - these comprise the human resource year end accruals as de</li> </ul>	escribed above for the previous year.
42		WIAL notes that the Determination currently defines "other temporary adjustments – prior period" to include	de depreciation. The Commission has separately
43		confirmed that depreciation should be excluded from this adjustment and on 22 March 2012 provided WIA	
44		Determination.

### **Explanation of Variances**

### Capital Expenditure

Total capital expenditure

Actual capital expenditure was below forecast in the year ended 31 March 2016 (2016) (\$34.7m actual compared to a forecast of \$40.0m). The main reason for the underspend in 2016 is the lower than expected residential acquisitions (Noise Mitigation Works), deferral of the MAGs project, lower than forecast spend on the Terminal South Extension ("TSE") project and delayed start to the Main Terminal Building - Central Hall project that is dependent on the completion of the TSE project.

Actual capital expenditure for the PSE3 pricing period is also below forecast (\$48.0m compared to a forecast of \$78.4m). The primary driver of the underspend in PSE3 to date is the delay in commencement of the TSE project. In addition, several projects are dependent on this project and consequently have also been delayed. WIAL remains committed to progressing each of the specified projects within PSE3 but was unable to do so during the year for the reasons noted below:

### Marine Protection

Capital expenditure was \$0.2m below forecast in 2016. The 2016 forecast included the manufacture and deployment of Akmons. This work has commenced in early 2017 with the manufacture of 150 Akmon units to meet demand.

Capital expenditure is \$0.8m below forecast for PSE3 to date. The PSE3 forecast included the manufacture and deployment of Akmons as noted above. This work is now scheduled to occur in 2017.

### Gates, Aprons and Movement Areas

2016

Capital expenditure for the airfield relating to Movement Areas, Aprons and Gate categories is managed in aggregate. The overall actual capital expenditure of \$2.2m for 2016 was in line with the forecast.

PSF3 to date

Capital expenditure on Movement Areas, Aprons and Gates in PSE3 to date is \$4.6m below forecast. The forecast provided for expenditure on the Eastern Apron (including Bravo 8 and Bravo 9) which has been largely addressed as part of the Southern Apron development design (within the TSE project) to enable the most efficient method of delivery. Some works have also been deferred until completion of the TSE project.

### Operational Compliance Works

2016

Capital expenditure in 2016 was \$0.4m above forecast. Work to install Nose-in Guidance units ("NIGS") on additional gates has commenced during 2016. This was originally included in the forecast for 2017. PSE3 to date

Capital Expenditure on Operational Compliance Works is \$1.9m below forecast for PSE3 to date. The forecast for this category included provision for iet blast deflectors, NIGS units and upgrading the pedestrian subway. The pedestrian subway project was completed in 2015 at a lower than expected cost. The jet blast deflectors project has been deferred. The NIGS rollout has commenced and will continue in 2017.

Airport Companies must provide a brief explanation for any line item variance of more than 10%

\* Disclosure year coincides with Pricing Period Starting Year + 1.

### Explanation of Variances (continued)

### Other Airfield (including Clearway)

Capital expenditure in 2016 was \$37k against a PSE3 forecast of nil. The Clearway project was completed earlier than expected in 2014, enabling increased payload for certain aircraft operating out of Wellington. The amount included in 2016 (and therefore PSE3 to date) reflects retentions relating to the Clearway project that were finalised in 2016.

Capital expenditure for MAGS was deferred to 2017, Planning works are underway and the project is expected to commence in the 2017 financial year.

### Terminal South Extension

The forecast for the Terminal South Extension project ("TSE") was broken down into separate terminal and apron elements but the actual expenditure has subsequently been combined due to the interdependencies between the two elements of the project.

Capital expenditure for TSE was \$26.3m compared to a forecast of \$27.3m for 2016. PSE3 to date

Capital expenditure for TSE was \$33.6m actual compared to a forecast of \$43.6m across the two TSE key capital expenditure projects in the PSE3 forecast. The project had been expected to enter the construction phase in August 2014 but construction did not commence until December 2014. The total cost estimate for the project is still expected to be in line with the PSE3 forecast and the project is now expected to be completed during 2017.

### North Terminal Development - Domestic Passenger Facilitation

2016 and PSE3 to date

The North Pier reconfiguration work was completed in January 2015 for \$1.6m actual compared to the \$2.0m forecast for the 2015 year. Minor additional costs were incurred in 2016 prior to the financial close of the project.

### Main Terminal Building - Central Hall

2016 and PSE3 to date

Capital expenditure for MTB - Central Hall was \$54k compared to a forecast of \$1.4m for 2016 (and PSE3 to date). Early design work for the Main Terminal Central Hall work commenced during the year. Construction is expected to begin in the 2017 financial year following completion of the TSE project.

### Multi Level Transport Hub - Roading and Infrastructure

2016 and PSF3 to date

Capital expenditure for Multi Level Transport Hub - Roading and Infrastructure was \$0.6m compared to a forecast of nil. The project includes provision for certain shared roading elements which provide access for pick-up and drop-off as well as facilitating other ground transport movements. The \$0.6m spend to date relates to the aeronautical component of that project based on a projection of the overall shared element of the total project.

### Noise Mitigation Works

2016 and PSE3 to date

Capital expenditure for Noise Mitigation Works for 2016 and PSE3 to date is below forecast by \$2.5m and \$4.5m respectively. The forecast for both 2015 and 2016 provided for the acquisition of six houses (a total of 12 houses for PSE3 to date), however acquisitions are dependent on home owners offering their properties for sale. Two properties were purchased by WIAL's noise mitigation subsidiary Wellington Airport Noise Treatment Limited for \$0.9m in 2015, however as the buildings were removed and written off within the same year the building value is not included in the capital expenditure of \$0.4m for PSE3 to date.

### Other capital expenditure

2016

Other capital expenditure was \$4.7m compared to a forecast of \$3.9m in 2016, \$0.8m above forecast. The variance to forecast is primarily due to higher than forecast capital expenditure relating to IT projects such as Common User Terminal Equipment, CCTV, Public Address system and Airport 20/20 System Enhancements (ACDM and RMS modules). Refer to Schedule 15 for further commentary. PSE3 to date

Other capital expenditure was \$6.1m compared to a forecast of \$9.6m for PSE3 to date. In addition to the projects noted for 2016 above, PSE3 actual spend includes expenditure on upgrades for the core IT network upgrades and WIAL's corporate intranet. The variance to forecast is primarily due to timing differences where projects have commenced later than expected and also due to cost savings.

### Operational Expenditure

### Total Operational Expenditure

Total Operational Expenditure was \$17.6m compared to a forecast of \$20.1m. Variances between actual and forecast CPI inflation have impacted all operational expenditure categories. The actual increase in CPI for 2016 was 0.59% compared to a forecast increase of 2.43%. The actual increase in CPI for PSE3 to date was 0.67% compared to a forecast CPI increase assumption of 4.74%. The variance in the inflation assumption is the driver of a \$1.1m variance across total operational expenditure.

Other drivers of the main variances to forecast in Operational Expenditure are outlined below:

### Asset Management and Airport Operations

Asset Management and Airport Operations expenditure for 2016 was \$11.6m compared to a forecast of \$13.5m. The 2016 forecast assumed that a total of six properties would be acquired by WANT Ltd under the LUMINS programme in 2016, with an associated write-down of \$1.5m due to the disposal of the residential dwellings. No properties were acquired by WANT Ltd during 2016.

Asset Management and Airport Operations expenditure for PSE3 to date is \$23.3m compared to a forecast of \$26.3m. The PSE3 forecast assumed that a total of 12 properties would be acquired by WANT Ltd under the LUMINS programme, with an associated write-down of \$2.9m due to the disposal of the residential dwellings. As only two properties have been purchased in PSE3 to date, actual write-down and disposal costs were \$0.7m, a net variance to forecast of \$2.2m. In addition, a further \$0.7m variance to forecast relates to the lower than forecast CPI (as noted above).

### Asset Maintenance

Asset Maintenance expenditure for 2016 was \$2.3m compared to a forecast of \$2.8m. The variance of \$0.5m relates to an amount included in the forecast for the removal of Bridge St bund which did not occur during 2016.

Asset Maintenance expenditure for PSE3 to date is \$4.5m compared to a forecast of \$5.2m. The variance of \$0.7m to forecast primarily relates to the amount in the forecast for the removal of Bridge St bund as noted for 2016 above, plus \$0.2m relating to the lower than forecast CPI (as noted above).

### Commentary on Segmented Information

# Specified Passenger Terminal and Airfield Activities

The segmented outcomes above produce ROI's of 5.9% or 5.3% excluding revaluations (2015: 5.0%) for the specified passenger terminal activity and 12.3% or 8.4% excluding revaluations (2015: 7.4%) for the airfield activity. In WIAL's view, these returns are consistent with the forecast outcome from the price setting approach taken for PSE3 after allowing for actual revaluations being higher than forecast.

### Aircraft & Freight Activities

This segment produces an ROI of 8.0% or 4.2% excluding revaluations (2015: 4.7%). WIAL confirms that rental levels for individual tenants are established via commercially negotiated agreements, following receipt of advice from valuers and negotiations with tenants or prospective tenants. Valuers, in forming their advice establish commercial valuations of the properties which reflect their expectation of market rental levels.

from the month of acquisition. Similarly, in respect of transfers to/from the regulated asset base the IMs preclude recognition of regulatory depreciation in that year while these assets are depreciated for financial reporting purposes.

· WIAL recognises salvage values for a number of assets in its depreciation calculations meaning these proportions of assets will not be depreciated to nil in WIAL's financial statements. The IMs depreciation formula does not recognise salvage values. Revaluations
The regulatory asset base (excluding land) is rolled forward by CPI indexing in accordance with the Determination. Land is valued at MVAU - see

comment under Property, Plant and Equipment below.

The annual tax expense calculated for financial reporting purposes includes recognition of deferred tax adjustments in respect of non-land and building structure assets and the actual financing arrangements undertaken by WIAL. The calculation of the tax expense per the IMs does not recognise deferred tax adjustments and includes a notional tax deduction for financing costs calculated in the manner prescribed by the IMs.

# Property, Plant and Equipment

Differences in the Property, Plant and Equipment values between the regulatory and GAAP approaches arise from:

- Land valuation land valuation is recognised at MVAU per the IMs in the RAB while land is required to be valued at fair value, Market Value Existing Use (MVEU) for financial reporting.
- · Buildings, civil and plant and equipment assets different revaluation and depreciation treatments are required for regulatory reporting compared to the requirements for financial reporting. The differences in the processes to calculate depreciation are explained above. In addition, per the IMs for regulatory reporting the value of these assets is required to be increased by CPI annually. Valuations for financial reporting are undertaken periodically with assets, excluding plant and equipment, valued at optimised depreciated replacement cost. Plant and equipment assets are not revalued for financial reporting.

  • Future use assets – per the IMs these are excluded from the RAB but are included in the Airport Business GAAP assets for financial reporting
- purposes.

### Fixed electrical ground power availability (if applicable)

The percentage of time that FEGP is unavailable due to interruptions\*

0.0012%

\* Disclosure of FEGP information applies only to airports where fixed electrical ground power is available

### Commentary concerning reliability measures

### Process for Determining Responsibility for Interruptions

WIAL maintains a database that records each breakdown in respect of the facilities recorded in Schedule 11. Each breakdown that occurs is then evaluated by WIAL's Manager Airport Performance to determine whether it meets the criteria for a reportable interruption. The assessment is undertaken in accordance with "Appendix C: Reliability Conditions for Disclosure" of the Information Disclosure (Airport Services) Reasons Paper published by the Commission on 22 December 2010.

The evaluation includes assessment of the party responsible for the interruption and may include discussions with airlines if airlines contributed to the cause of the interruption.

The number and duration of on time departure delays increased during 2016 to 22 flights and a total duration of 9 hours and 9 minutes (2015: 10 flights and a duration of 3 hours and 30 minutes), although overall there were only two more incidents recorded than the previous reporting period (2016: 7 incidents, 2015: 5 indicents). WIAL remains committed to maintaining appropriate service levels and well maintained facilities.

Five of the seven occurrences that resulted in delays to aircraft were related to the departure process of the baggage handling system ("BHS"). One occurrence alone accounted for a cumulative total of 4 hrs 24 mins of delay to 11 aircraft while an issue with an electronic component of the BHS was resolved. The other BHS related occurrences related to:

- physical damage to the system caused by an airline staff member;
- bags on the belt becoming jammed in the system;
- conveyor belt being torn by a diverter blade;
- communication failure between the WIAL system and an interfacing airline system.

Of the other occurrences, delays occurred when a wide scale airport power outage that caused terminal wide issues, including causing certain aerobridges to fault. One aircraft was unable to depart on time until an affected aerobridge could be retracted.

Lastly one occurrence resulted in a delay of 1 hour to an aircraft as a consequence of a pavement failure on the exit from the aircraft remote stand. The aircraft had to remain insitu while the pavement was repaired before it could depart.

### Process to Consider Requirement for Operational Improvements

The interruptions are discussed with participants at the TEAM WLG meetings (an acronym for Together Everyone Achieves More).

TEAM WLG continues to operate well and focuses on service reliability, service performance and a review of ASQ results, as well as airport collaborative decision making as a model for improving passenger and aircraft processing. During the year there were 3 meetings held. The meetings assist in confirming responsibility for interruptions and to consider whether process improvements are required.

Must include information on how the responsibility for interruptions is determined and the processes the Airport has put in place for undertaking any operational improvement in respect of reliability. If interruptions are categorised as "occurring for undetermined reasons", the reasons for inclusion in this category must be disclosed.

Regulated Airport Wellington International Airport Limited For Year Ended 31 March 2016 SCHEDULE 12: REPORT ON CAPACITY UTILISATION INDICATORS FOR AIRCRAFT AND FREIGHT ACTIVITIES AND AIRFIELD **ACTIVITIES** Runwav #1 Runwav #2 Runway #3 Description of runway(s) 16-34 Designations Length of pavement (m) 2,051 Width (m) 15 Shoulder width (m) Runway code 4E ILS category orv I [Select o Declared runway capacity VMC (movements per hour) 38-36 for specified meteorological IMC (movements per hour) condition Taxiway Taxiway #1 Taxiway #2 Taxiway #3 Description of main Main 20 taxiwav(s) Length (m) 21 2,051 Width (m) 23 Status ngth 24 Number of links Aircraft parking stands Number of apron stands available during the runway busy day categorised by stand description and primary flight category 26 Contact stand-airbridge Contact stand-walking Remote stand-bus Air passenger services International 29 Domestic jet 30 Domestic turboprop Total parking stands 31 Busy periods for runway movements Date Runway busy day 2 April 2015 Runway busy hour start time (day/month/year hour) 35 28 Oct 2015 8 a.m. 36 Aircraft movements Number of aircraft runway movements during the runway busy day with air passenger service flights categorised by stand description and flight category Contact stand-airbridge Contact stand-walking Remote stand—bus Total Air passenger services 40 International 16 16 Domestic iet 84 84 Domestic turboprop 188 Total 100 188 288 45 Other (including General Aviation) 43 47 Total aircraft movements during the runway busy day Number of aircraft runway movements during the runway busy 31 50 hour Commentary concerning capacity utilisation indicators for aircraft and freight activities and airfield activities Busy Day and Hour Information
WIAL commissioned Airbiz Limited (Airbiz) to provide advice on the technical information required to be disclosed by WIAL. Airbiz were also requested to determine the required busy hour and busy day statistics to be included in this Schedule. 54 55 56 WIAL's runway capacity varies depending on the direction of use of the runway (namely runway 16 or 34) and weather conditions. WIAL's busy hour demand was assessed at 31 57 movements per hour. The 31 movements is below available capacity in clear weather conditions (VMC conditions) but exceeds available capacity when weather conditions are poor (IMC conditions) 58 WIAL expects that the demand on runway availability will increase in the future as aircraft movements grow to accommodate the forecast increase in passengers. WIAL anticipates 59 that aircraft movements should not increase at the same growth rate as passengers because WIAL expects airlines to increase the average size of aircraft in their fleet.
WIAL is working with the airlines, Airways Corporation (Airways) and other stakeholders to implement measures to manage the prospective congestion to ensure appropriate changes 61 to facilities that could increase runway movement capacity are identified and implemented. In 2016, WIAL continued to work with stakeholders to deliver works which may increase runway capacity. This includes the Airport Collaborative Decision Making (ACDM) initiative as outlined in Schedule 15. 62 63 64 WIAL has 11 aircraft stands available with aerobridge services. The 8 WIAL parking stands adjacent to the North Pier are swing gates and therefore available for international as well 65 as domestic use. As the parking stand capacity data reported is for a busy day period we have included the North Pier aircraft gates as being available for both international and 66 domestic aircraft. On the runway busy day there were no aerobridges out of service. 69 70

#### Commentary concerning capacity utilisation indicators for Passenger Terminal Activities

WIAL operates a common use terminal facility with areas directly provided to arriving or departing passengers where required by Customs border processing or Avsec security requirements. The utilisation data above reflects the use of the terminal by common use, international or domestic passengers as appropriate.

#### Passenger Data

WIAL commissioned Airbiz to provide passenger busy hour and day information required to be reported in this Schedule. Airbiz were provided with the aircraft movement and passenger data that WIAL received from Airways and its airlines for the year. Major airlines provided detailed information to WIAL on passenger numbers carried for each flight allowing an assessment of arriving and departing passengers on an hourly basis. Airbiz applied the adjustments per the Determination as required (i.e. the allowance for domestic transfer and transit passengers in the check-in passenger throughput).

#### Baggage Reclaim

WIAL does not have the technical capacity at present to count bags processed by the baggage reclaim units. WIAL has used benchmarked information to calculate the assumptions for the number of bags carried per passenger:

- For international passengers an average of 0.7 bags for each international passenger; and
- For domestic passengers an average of 0.7 bags.
- These figures cover all passengers, including those who only travel with carry-on baggage.

WIAL has applied these assumptions in estimating the bags processed during the passenger busy hour.

Two baggage reclaim carrousels continue to be used as standard for international arrivals with carrousels being allocated to alternate flights to improve passenger distribution within the arrivals hall. This is facilitated by the use of moveable walls that temporarily extend the international arrivals hall. When international loadings are low however, only one reclaim carrousel is used.

#### Determination of Capacities

WIAL capacities were determined as follows:

- Airbiz were engaged to provide advice on all floor areas required to be reported in this Schedule. Airbiz developed the required measures from its review of building plans provided by WIAL.
- Baggage (outbound) capacities were advised by the system manufacturer, Glidepath, for the two baggage outbound units operated by WIAL and Avsec for the X-ray machine process capability.
   Passport control (outbound) advised by Airbiz following the receipt of Customs advice, namely 50 seconds per passenger processing time plus 5 seconds per
- Passport control (outbound) advised by Airbiz following the receipt of Customs advice, namely 50 seconds per passenger processing time plus 5 seconds per
  passenger allowance to move from queue to counter (for conventional counters) and 22 seconds per passenger processing time plus 5 seconds per passenger
  allowance to move from queue to gate (for SmartGates).
- Security screening advised by Airbiz following receipt of Aviation Security advice. Determined from number of screening stations multiplied by passengers per hour as advised by Avsec. International 2 stations at 270 passengers/hour and domestic 4 stations at 270 passengers/hour.
- Departure lounges number of seats determined by a physical count by WIAL operations staff. The numbers listed include general, food court and tenancy seats.
- Passport control (inbound) advised by Airbiz following receipt of Customs advice that for:
- o a conventional counter 50 seconds per passenger processing time plus 5 seconds per passenger allowance to move from queue to counter; and o a SmartGate biometric gate 22 seconds per passenger processing time plus 5 seconds per passenger allowance to move from queue to gate.
- of a Smartoate biometric gate 22 seconds per passenger processing time plus 5 seconds per passenger allowance to move from queue to gate.

  Baggage reclaim the baggage system manufacturers, Glidepath, advised that the technical capacity of each baggage reclaim belt is 1,800 bags per hour derived from one bag per metre loaded onto the belt and a belt speed of 0.5m/s. The practical capacity is likely to be lower with baggage handlers unlikely to be able to load bags to this capacity and recirculating bags reducing available capacity for new bags to be loaded.
- Biosecurity screening and inspection and customs secondary inspection advised by Airbiz, based on practical capacity of 190 passenger per hour per screening station and the assumption that 50% of passengers are assessed.

## Comment on Baggage (outbound) Utilisation

The utilisation statistic of 25% above provides the proportion of technical capacity that is utilised by bags loaded on the outbound baggage belts.

#### Terminal Floor Areas

No significant changes were made to terminal floor areas for the 2016 year.

The margin of error requirement specified in clause 2.4(3)(c) of the determination applies only to the combined quarterly survey results for the disclosure year. Quarterly results may not conform to the margina of error requirement.

#### Commentary concerning report on passenger satisfaction indicators

WIAL operates a common use terminal facility with most of its facilities used by both domestic and international passengers. The survey outcomes of these facilities therefore reflect the survey views of the category of passengers rather than reflecting the service outcomes for separate terminals. The survey measures are reported on a scale with a maximum score of 5.

WIAL continues to rate highly in its ASQ scores, with an average domestic score of 4.1 and an average international score of 4.1 (based on those survey categories identified in Schedule 14) for last year.

#### **Domestic**

Initiatives are underway to address the lower rated areas particularly in respect of the comfort of waiting/gate areas and availability of washrooms/toilets facilities. WIAL has now commenced the Terminal South Extension (TSE) project. This project will see improvements to the South and the South West Pier, including redesign of the departure gate lounges, and additional toilet facilities. Also extra aircraft stands will be added (4 turbo prop stands and 1 jet stand). Refer to Schedule 15 for further detail.

#### International

International passengers were asked to provide a score for "ease of making connections with other flights". WIAL notes that there is generally insufficient passengers that connect from other flights to enable a statistically representative average score to be calculated by the ASQ programme managers. This occurrence is because passengers largely travel direct to/from Wellington airport. The ASQ programme managers did not provide an average score for any of the four quarters due to insufficient response. In 2013, WIAL received an on-going exemption from the Commission to not publish this score where it is not able to be provided by the ASQ programme managers.

#### Accuracy of Passenger Data to Prepare Utilisation Indicators

Refer to the comments in Schedule 13.

## Location of Survey Fieldwork Documentation

The survey fieldwork documentation is available on WIAL's website www.wellingtonairport.co.nz.

Commentary must include an assessment of the accuracy of the passenger data used to prepare the utilisation indicators and the internet location of fieldwork documentation

## Disclosure of the operational improvement process

The Information Disclosure Determination requires WIAL to establish operational meetings with airlines to:

- Identify measures available to either reduce the likelihood of service losses which have caused significant disruption or on time delays from
  reoccurring; or to better manage the impact of service losses so as to reduce their impact;
- · Confirm the responsibility for service interruptions as required; and
- Review quarterly passenger satisfaction surveys to identify where remedial action is required by the airport, airlines or border agencies.

WIAL is committed to maintaining and improving service quality for its customers and enhancing the airport's facilities in response to customer feedback and changes in demand.

#### **Service Quality Monitoring**

#### Airport Service Quality (ASQ)

WIAL continued to obtain passenger feedback from the ASQ quarterly surveys and undertook a variety of meetings and communications with airlines and other parties to monitor the quality of WIAL's operations and to implement service and process improvements where required.

#### TEAM WLG Meetings

TEAM WLG meetings continued to be held in 2016, as detailed in Schedule 11. The TEAM WLG forum focuses on service reliability, service performance, review of ASQ results and presentations of projects the individual stakeholders are working on. TEAM WLG stands for Together Everyone Achieves More (at) Wellington with the overall aim to put the passenger central and discuss how we can improve the overall service and collaboration.

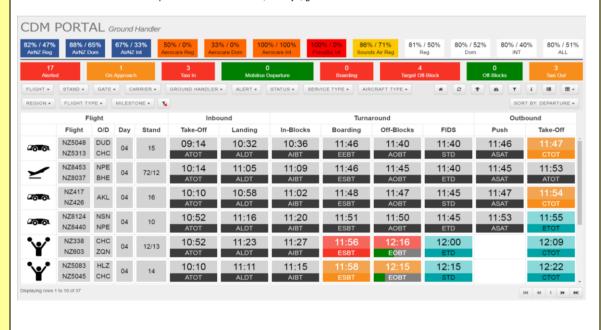

#### Airport Collaborative Decision Making (ACDM)

The ACDM module within the Gentrack Airport 20/20 application has now successfully been implemented at WIAL. By doing so WIAL is the first in Australasia to have both jet and turbo prop services on an ACDM platform. ACDM is an operational concept that is being advanced by the International Civil Aviation Organisation (ICAO), and is also supported by Airports Council International (ACI) and the International Air Transport Association (IATA). ACDM is about aviation partners working together more efficiently and transparently resulting in operational efficiencies and enhanced traffic capacity.

#### ACDM provides the following benefits:

- Reduction in aircraft holding patterns, resulting in lower fuel burn (reduced costs and improved environmental footprint)
- · Reduced apron congestion and increased predictability of aircraft movements
- Improved on-time performance
- Better slot allocation (more efficient for Air Traffic Control)
- Provides proactive alerts for staff to better manage daily operations
- Contributes to an improved passenger experience and improved service levels
- Cost savings through improved asset utilisation

A screen shot of the main ACDM portal available to airlines, Airways, ground handlers and WIAL is shown below:

The process put in place by the Airport for it to meet regularly with airlines to improve the reliability and passenger satisfaction performance consistent with that reflected in the indicators.

#### Disclosure of the operational improvement process

Other stakeholder engagement meetings at WIAL

In addition to TEAM WLG there are a number of other pre-set meetings with stakeholders which address the safety and service at Wellington Airport:

- · Landside safety risk committee (meets 4 times a year)
- Airside safety and risk committee (meets 4 times a year)
- Airspace user forum (meets 4 times a year)
- · Airline Allocation Meeting (4 times a year).

Weekly meetings with stakeholders are being held for various improvement projects such as:

- · Terminal South Extension
- International Arrival Enhancement
- · Multi-level Transport Hub

See below for further detail on each of these projects.

#### Operational Improvement Initiatives

A number of specific initiatives were commenced or continued during the year. These included:

#### Terminal South Extension

The Terminal South Extension ("TSE") development incorporating a 35 metre (6000sqm) extension of the main terminal to the south and redesign and expansion of the south and south-west piers is nearing completion. The TSE project will widen the width of both southern piers, add centralised security screening, provide extra gate lounge space, increase the retail mix and double the number of toilets. The southern apron will also be extended and reconfigured to use the area most efficiently and provide more parking space for aircraft.

#### International Arrivals Enhancement

The International Arrival Enhancement ("IAE") project commenced in March 2016 to address congestion, improve levels of service and cater for growth in international passenger numbers. The IAE project incorporates an increase in space for primary processing, allowing for the addition of two conventional processing counters and five SmartGate+ lanes. The secondary processing area will also be reconfigured to allow for improved queue management and increased passenger throughput. In order to facilitate this additional space the existing toilets, the Customs Control Room and the VIP room will be relocated. These works will assist in managing the strong growth in international passenger numbers and is complimentary to the longer term plan to develop the international terminal. This project is expected to be completed by the end of 2016.

#### Multi Level Transport Hub

The Multi Level Transport Hub project commenced in February 2016 and is scheduled for completion in December 2017. The project will create an extra 1,000 covered car parks and provide improved facilities for passenger drop-off/pick-up and ground transport operations such as taxis and buses.

### Common Use Terminal Equipment

WIAL's new Common Use Terminal Equipment ("CUTE") platform has been implemented resulting in 18 check-in desks, 8 departure desks and 3 arrivals desks being converted to a platform that can be used by all airlines operating at WIAL (with the exception of Air New Zealand who have their own in-house system).

The benefits of the CUTE platform for airlines are:

- Pay per use
- Responsibility for IT support, maintenance and consumables moves to WIAL
- Ease of use for ground handlers
- Queuing and barriers managed and maintained by WIAL
- · Increased flexibility at departure gates
- Useful features for airlines and back up options for business disruptions

The benefits of a CUTE platform to WIAL are:

- Efficient use of check-in space
- Smart looking desks without duplicate IT hardware for each airline
- Improved ability to facilitate new airlines
- · Ability to add other common use technologies to the platform in future such as common use self-boarding gates

The northern check-in area has also been upgraded to provide better signage through the provision of large LCD screens; 2-sided counter sliders for information purposes; better lighting and seating for staff and a better TENSA barrier system for passenger queuing.

#### Transitional Facility

An increase in international services has resulted in an increase in quarantine waste. To manage this increase, WIAL has constructed a new facility as a temporary storage area pending collection and disposal. All airlines have been supportive of this initiative as the facility is more conveniently located and reduces resources required to transport the waste.

The process put in place by the Airport for it to meet regularly with airlines to improve the reliability and passenger satisfaction performance consistent with that reflected in the indicators.

#### Lightning Warning and Alerting System

WIAL has installed a lightning warning and alerting system in and around the airside apron areas during the year. This system will provide stakeholders visual and audible alerts to provide notification of any lightning activity in the vicinity of the airfield. The alerts enable each organisation to commence any pre-lightning mitigation activity to protect their staff and equipment. The system will be activated from data received from the MetService who have developed a cloud based lightning warning system.

#### Nose-In Guidance System

A new type of Nose in Guidance System ("NIGS") has been introduced on most jet stands. The NIGS gives information to a pilot parking an aircraft at a precise location on the stand. The unit provides both azimuth (centre line) and stopping guidance. This allows the pilot to remain clear of obstructions and ensures that aerobridges can reach the aircraft. The NIGS units are integrated with WIAL's Airport Operating Data Base ("AODB") to provide real-time on/off block times. This information is shared to the benefit of ACDM users.

#### International Meet and Greet Area

Improvements have been made to the international arrivals area on the lower level of the main terminal. A new wall has been put in place to redirect the exit for arriving passengers. This has improved passenger flow into the meet and greet area and created more floor space for welcomes. The seating capacity in the area has also increased.

Resource Management System
Wellington Airport operates 27 aircraft stands. All aircraft need to be allocated to a free stand as soon as they land. Previously this task was conducted manually and was reliant on the operational experience of the staff member responsible. In 2016 the Resource Management System (RMS) module within the Gentrack Airport 20/20 application was deployed. Gate allocation is now fully automated with automatic updates and alerts if a manual intervention is required. Aside from moving away from a manual process, the RMS tool enables the airport community to view real-time scheduling of gates and stands (including the solving of allocation conflicts), provide the optimum allocation based on a set of business rules and a graphical Gantt chart display for ease of use.

#### Pedestrian Walkway

WIAL created a passenger walkway outside the northern end of the car park precinct to give staff and passengers safe walking access to/from the eastern suburbs and the airport.

#### Terminal Seating

The terminal has been fitted out with new seating. Airport stakeholders have been involved in the selection of the new beam seats.

#### Aerodrome Emergency Plan and Business Continuity Plan on mobile devices

WIAL's emergency and business continuity plan are now contained in a useable format installed and accessed directly on all management smartphones and where desired other mobile devices such as tablets. The experience of having the BCP and EAP procedures always and easily accessible has been very positive.

## WiFi enhancements

Extra capacity been added to the Public WiFi System so it is now available in the baggage reclaim; international arrivals and the south west

#### CCTV Platform Enhancement

The provision of a high quality Closed Circuit TV ("CCTV") service is considered an essential piece of airport infrastructure for enhancing airport operations, security and safety. WIAL is in year four of a five year plan to migrate all CCTV systems and cameras to the Cisco VSM platform. Recently WIAL expanded coverage of the CCTV within the airport campus and provided more critical backend storage/redundancy.

## There is a particular emphasis on:

- · Apron Management: dedicated fixed views that WIAL have agreed with Airways to support their continued management of the apron operation. This area has become critical from WIAL's certification/regulatory perspective. The cameras are focused on the taxi lanes and holding positions.
- · Airside: the general camera locations required to support ACDM and airline operations as well as the WIAL Operations team. These cameras focus on the actual aircraft stands themselves.
- · Public entry/exits and our first SMART application (people counting)

Together, this will add up to 48 new cameras to the existing CCTV platform of 140 cameras and 120TB of extra storage.

## Interactive Voice Response ("IVR") improvements

The IVR facilities on WIAL's main telephone number have been upgraded to make it simpler for airport callers to use.

#### Baggage Handling System

The software components of the baggage handling system have been upgraded to increase its reliability and ability to send alerts to the airport control room as well as providing an improved set of reports.

#### The Public Address System

The current Public Address system was implemented in 1999 and covers all areas except The Rock. The current upgrade will address zoning issues and sound quality and allow for more use of pre-recorded messages.

The process put in place by the Airport for it to meet regularly with airlines to improve the reliability and passenger satisfaction performance consistent with that reflected in the

32 33	14444 1 4 4 4 4 4 4 4 4 4 4 4 4 4 4 4 4	4 for prices effective 1.1	une 2014 to 31 March
34 35	2019. The Schedule of Charges for the PSE3 pricing period are available on WIAL's website (www.wellingtonairport.co.nz)		
36 37	WIAL's charges are set for each service to incentivise the efficient use of the services. These include:	ed to WIAL as described	I in Schedule 16.
38	Specified terminal services – per passenger charges.		
40	Check in facilities – time and occupied area based charges.     Noise mitigation and insulation – per passenger and aircraft charges.		
42	Revenue from each of these charges has been grouped into each of the categories required in this Schedule. The average Schedule will therefore not correspond directly with WIAL's Schedule of Charges.	e charges per tonne and	passenger shown in the
44 45	WIAL's average charge per international passenger and per tonne of aircraft weight demonstrate that the circumstances of	f each individual airport in	nfluence any direct
	WIAL's total average charge per international passenger is below the average charges disclosed by Auckland and Christo     WIAL's average charge per tonne is considerably higher than those disclosed by both Auckland and Christchurch airports	s for jet aircraft. This is i	nconsistent with the
	average passenger charge and reflects the difference in the aircraft types using the three airports. In particular, both Auckl wide body long haul aircraft which do not operate at WIAL. These aircraft have a significantly higher weight per passenger at WIAL. This increases the relative volume of chargeable MCTOW and results in an average charge per tonne at Aucklan WIAL.	seat compared to the si	maller aircraft operating
46	The Schedule of Charges implemented by WIAL from 1 June 2014 has been structured so that over the five year pricing per passenger will move closer to each other to reflect common use of the facilities. The change in charging approach will transwill result in charges per international passenger decreasing and charges per domestic passenger increasing.		
	WIAL has adopted a pricing methodology designed to recover the cost of providing specified aeronautical services through and investment in, WIAL's assets in accordance with expert advice. This is consistent with the methodology adopted in PS methodology made to incorporate airline feedback. Feedback was particularly relevant regarding the new charges impleme and aircraft parking charges. Examples of price structure changes adopted for PSE3 were:	SE2 but with some enhar	ncements to the
	A more gradual approach to the introduction of peak/shoulder charges;     A reduction in the charges for check-in counter usage;     A more gradual movement toward comparable charges per passenger across different aircraft types; and		
	A relaxation of the times during which aircraft parking is payable.  These changes preserve WIAL's objective to encourage efficient use of WIAL's facilities but now also reflect the experienc modifications put forward by airlines to simplify the application of the price structure. Further comprehensive comment on v provided in the Price Setting Event Disclosure which is available on WIAL's website.

# Commerce Act (Specified Airport Services Information Disclosure) Determination 2010 dated 22 December 2010

## Schedule 20 - Certification for Disclosed Information

We, Tim Brown and Keith Sutton, being directors of Wellington International Airport Limited certify that, having made all reasonable enquiry, to the best of our knowledge, the following attached audited information of Wellington International Airport Limited prepared for the purpose of clauses 2.3(1) and 2.4(1) of the Commerce Act (Specified Airport Services Information Disclosure) Determination 2010, as amended in all material respects complies with that determination.

**Tim Brown** 

Director 22 August 2016 Keith Sutton

Director

22 August 2016

# Independent Reasonable Assurance Report

## To the directors of Wellington International Airport Limited

We have performed an engagement to provide reasonable assurance in relation to Schedules 1 to 17 for the regulatory year ended 31 March 2016 ('the Airport Schedules'), prepared by Wellington International Airport Limited ('the Company') in accordance with the Commerce Act (Specified Airport Services Information Disclosure) Determination 2010 (the 'Determination').

## Directors' responsibility for the Airport Disclosure Schedules

The directors of the Company are responsible for the preparation of the Airport Disclosure Schedules in accordance with the Determination. This responsibility includes such internal control as the directors determine is necessary to enable the preparation of the Airport Disclosure Schedules that is free from material misstatement whether due to fraud or error.

## Auditor's responsibility

Our responsibility is to express an opinion to the directors on the preparation and presentation of the Airport Disclosure Schedules in accordance with the Determination. In accordance with the Determination we owe a duty of care to the Commerce Commission and our engagement has been planned and performed in recognition of this duty of care.

We conducted our reasonable assurance engagement in accordance with International Standard on Assurance Engagements (New Zealand) ISAE (NZ) 3000 (Revised) *Assurance Engagements other than audits or reviews of historical financial information* and Standard on Assurance Engagements SAE 3100 *Compliance Engagements* issued by the External Reporting Board. These standards require that we comply with ethical requirements and plan and perform our engagement to provide reasonable assurance about whether the Airport Disclosure Schedules have been prepared in all material respects in accordance with the Determination.

An engagement to provide reasonable assurance involves performing procedures to obtain evidence about the amounts and disclosures in the Airport Disclosure Schedules. The procedures selected depend on the auditor's judgement, including the assessment of the risks of material misstatement of the Airport Disclosure Schedules, whether due to fraud or error. In making those risks assessments, we consider internal controls relevant to the Company's preparation of the Airport Disclosure Schedules in order to design audit procedures that are appropriate in the circumstances, but not for the purpose of expressing an opinion on the effectiveness of the entity's internal control.

Partners and employees of our firm may deal with the Company on normal terms within the ordinary course of trading activities of the Company. We have provided financial statement audit services, other assurances services and taxation advice to the Company. These matters have not impaired our independence as defined in the Determination as auditors of the Company for this engagement. The firm has no other relationship with, or interest in, the Company.

## Use of this report

This report has been prepared for the directors for the purpose of complying with the Commerce Act (Specified Airport Services Information Disclosure) Determination 2010 – Section 2.6. We disclaim any assumption of responsibility for any reliance on this report to any person other than the directors, or for any other purpose than that for which it as prepared.

## Scope and inherent limitations

Because of the inherent limitations of a reasonable assurance engagement, and the test basis of the procedures performed, it is possible that fraud, error or non-compliance may occur and not be detected. The opinion expressed in this report has been formed on the above basis. As permitted by Clause 2.6(3) of the Determination we have relied on records that have been sourced from a third party in respect of certain non-financial information. For these items, our procedures were limited to confirming that the information in the Airport Disclosure Schedules agreed to the third party records provided to us.

Our reasonable assurance engagement provides assurance that the forecast information included in the disclosures required by Schedule 6 of the Determination has been extracted from the forecast information prepared by the Company and used in the latest price setting event with the airlines. However, to avoid doubt, it does not provide any assurance that forecast information was accurate or reasonable or achievable, or that it subsequently proved to be accurate. We have no obligation to update our report for any subsequent changes that affect forecast information.

## **Opinion**

In our opinion:

- Subject to clause 2.6(3) and as far as appears from an examination of them, proper records to enable the complete and accurate compilation of the Airport Disclosure Schedules have been kept by the Company and the Airport Disclosure Schedules are based on these records;
- The disclosure information in Schedule 1 to 17 complies, in all material respects, with the Determination;
- The historical financial information in Schedules 1 to 10 pursuant to clause 2.3(1) of the Determination has been prepared, in all material respects, in accordance with the determination; and,
- Subject to clause 2.6(3), the non-financial information in Schedules 11 to 17 pursuant to clause 2.4(1) of the Determination complies, in all material respects, with the Determination.

We have obtained all the information and explanations we have required.

Our engagement was completed on 22 August 2016 and our opinion is expressed as at that date.

Wellington
