

SPECIFIED AIRPORT SERVICES ANNUAL INFORMATION DISCLOSURE FOR THE YEAR ENDED 31 MARCH 2015

Executive Summary

1. Introduction

Wellington International Airport Limited (WIAL) provides its Annual Disclosure and reporting of financial and service quality outcomes for the year ended 31 March 2015. This is WIAL's fifth Annual Disclosure under the Commerce Act information disclosure regime (ID Regime) which commenced following the publication of the Commerce Commission's Information Disclosure Determination in December 2010 (Determination).

WIAL recognises that the purpose of information disclosure, as provided in the Commerce Act (Act), is for WIAL to provide sufficient information to enable interested persons to assess WIAL's performance over time and in comparison to Auckland International Airport Limited (AIAL) and Christchurch International Airport Limited (CIAL).

WIAL considers that the ability of the Commerce Commission (**Commission**) and interested persons to assess WIAL's performance will improve over time as further information disclosures are published.

WIAL took the decision to re-consult with its substantial customers in 2013, and new prices became effective for the pricing period 1 June 2014 to 31 March 2019 (Price Setting Event period PSE3). As a result this Annual Disclosure reports actual outcomes against forecasts prepared under PSE2 and PSE3. The forecasts set out in this Annual Disclosure comprise two months of PSE2 (from 1 April 2014 to 31 May 2014) and 10 months of PSE3 (from 1 June 2014 to 31 March 2015).

WIAL is seeking to deliver world class service and quality to its airline partners, travellers, and the many businesses and agencies that work at the airport. WIAL's success is intertwined with the Wellington region's growth and economy. To further this growth WIAL is investing in promoting airlines services, and in the appropriate infrastructure that provides quality facilities at prices that represent sound value for money.

2. Return on Investment

WIAL's actual return on investment is set out in Schedule 1 of the Annual Disclosures. The return over the last five years has been as follows:

Year	WIAL's Post Tax Return on Investment	WIAL's Return on Investment excluding Revaluations	Commission's 75 th %ile Cost of Capital Published for WIAL	Impact on Revenue per annum	Cumulative Impact on Revenue ⁽¹⁾
2011	6.16%	5.14%	9.18%	\$17.2 million shortfall	\$23.7 million shortfall
2012	6.91%	5.44%	8.73%	\$10.4 million shortfall	\$37.0 million shortfall
2013	6.23%	5.43%	8.04%	\$10.5 million shortfall	\$49.3 million shortfall
2014	4.18%	6.63%	7.67%	\$19.8 million shortfall	\$70.7 million shortfall
2015	6.13%	6.05%	8.40%	\$12.4 million shortfall	\$83.1 million shortfall

⁽¹⁾ Shown in 2015 present value terms

The regulatory profit for the year has increased to \$25.2m (2014: \$18.0m profit). This provides a Return on Investment (ROI) of 6.13%.

The ROI is calculated in accordance with the Determination by dividing the regulatory return, including CPI indexed asset revaluations and revaluations from updated land revaluations, by the regulatory investment value (comprising the commencing asset base plus an allowance for additions and disposals during the year).

As shown in the table above, the actual returns for 2015 and all years since the commencement of the ID Regime are below the cost of capital determinations released by the Commission for WIAL.

The revenue shortfalls in the table demonstrate that WIAL is not earning excessive profits and in fact is currently earning revenues well below the levels that would be derived from applying the Commission's input methodologies (**IMs**).

3. Service Quality and Investment

WIAL is committed to providing an appropriate quality of service to all users of its airport services, undertaking planned investment and initiatives to facilitate passenger growth in future years and improve any areas of service or quality as required.

WIAL continues to rate highly in its ASQ (**Airport Service Quality**) survey scores, with an average domestic score of 4.1 in 2015 (2014: 4.1) and an average international score of 4.1 in 2015 (2014: 4.2). These compare extremely well against other airports around the world and WIAL is currently ranked the 2nd highest airport in Australasia¹ and in the top half in its worldwide peer group of airports with 5 to 15 million passengers per annum.

WIAL continues to consult with its airline customers and other stakeholders on operational matters. The TEAM WLG (an acronym for Together Everyone Achieves More) forum continues to operate well and focuses on service reliability, service performance and a review of ASQ results, as well as airport collaborative decision making as a model for improving passenger and aircraft operations.

WIAL continued to work closely with airlines to drive growth in travel and the opening of new markets. The Airport's focus on route development and its incentive scheme has supported the introduction of several international capacity increases, to the benefit of consumers and the economy:

- → Jetstar began operating services between Wellington and Gold Coast (3 per week) in December 2014, reinstating a route that last operated in 2009. Internal passenger surveys had identified this route as being the most requested new destination, and so the airport in partnership with the city was particularly pleased to deliver this new route.
- → Jetstar also commenced services to Melbourne (4 per week) in March on what was previously Wellington's most constrained and highest fare route. Jetstar's introduction has resulted in lower fares and more choice for passengers.
- Fiji Airways announced a direct Nadi service (2 per week) in December for commencement in June 2015. This service will provide a year-round Pacific Island holiday destination for residents, more travel choice for Wellington's large Pacific Island community, and a direct international link with West Coast United States.
- → Sounds Air expanded its Wellington operation, including the addition of services to Taupo and Westport replacing services suspended by Air New Zealand.

In Schedule 15, WIAL comments on a number of initiatives that have been completed or are currently in progress to deliver further improvements in service quality. These include the following:

¹ Source: ACI ASQ yearly ranking Q2 2014 – Q1 2015

- The Terminal South Extension (**TSE**) development incorporating a 35 metre (6000sqm) extension of the main terminal to the south and redesign and expansion of the south and south-west piers is well underway. The TSE project will double the width of both southern piers, provide extra gate lounge space, increase the retail mix, double the number of toilets and provide more parking spaces for aircraft. These enhancements are in part due to the introduction of larger A320 aircraft in New Zealand. The TSE project is scheduled to be completed in mid-2016.
- The North Pier gate lounge has been reconfigured in order to provide a better passenger experience. The size of the waiting lounge has doubled and the Avsec screening point has been repositioned to create more queueing space and a more efficient passenger flow. New public toilets have been added to the lounge after the security point, including disabled access.
- WIAL, in conjunction with Auckland International Airport Limited (AIAL) have continued to engage in the Airport Collaborative Decision Making (ACDM) nationwide project with Airways Corporation (Airways), airlines and ground handlers. ACDM is an operational concept that is being advanced by the International Civil Aviation Organisation (ICAO), and is also supported by Airports Council International (ACI) and International Air Transport Association (IATA). ACDM is about aviation partners working together more efficiently and transparently resulting in operational efficiencies and enhanced traffic capacity. The concept is based upon the key stakeholders sharing operational information (often automatically from existing systems), into a common software platform, which provides all stakeholders with a common situational awareness of aircraft movement across a network. WIAL has finalised the Solution Discovery & Design phase in order to create a clear understanding of exactly how ACDM will work at WIAL with a direct link to process improvements. Airlines and ground handlers have been important stakeholders during this phase. AIAL is currently implementing the first stage of ACDM, with WIAL to follow.
- → WIAL has established a new airport volunteer program in conjunction with Positively Wellington Tourism (PWT). The primary function of the 50 ambassadors is to facilitate passenger movements by checking for boarding passes, passports and departure cards and to provide direction and assistance. New information counters have also been placed at both International Arrivals and Departures.
- WIAL has created a computer based briefing for new pilots flying into Wellington. Operational restrictions that have been in place for decades have been rescinded as a result of this new training package. The briefing comprises of informative text, audio, high resolution photos and videos of the approaches to Wellington. An assessment is included to confirm the trainee understands the content. The training package is innovative and more customer friendly for

- visiting operators and airlines. The content of the package has been developed in conjunction with the CAA Flight Inspectors. Many airlines have already used the new training package.
- WIAL has completed work to realign and strengthen Taxiway Alpha 2. This work has resulted in reduced runway occupancy times, increased safety and increased runway strength.
- WIAL completed the strengthening of the pedestrian subway below the runway. This has increased the seismic rating of the subway and has enabled increased loadings for aircraft.
- WIAL has implemented an online Health and Safety training package for all contractors working at the airport, including a presentation, several videos and a final online assessment to complete the training. A certificate is issued once questions are answered successfully.
- To ensure the TSE project is executed in a safe manner in a live operational environment close coordination between the project team, the contractor and the airfield operations team is of utmost importance. The safety campaign launched for the works was a finalist at the national health and safety awards.
- The Air Noise mitigation scheme to protect residents against future aircraft noise has progressed well and WIAL completed the development of the package last year. A live trial on selected properties is now being conducted, before the Quieter Homes package is progressively rolled out later this year to all home owners in the Air Noise Boundary.

WIAL also continually reviews the quality of service it provides to its passengers and customers including commissioning of passenger surveys and through a collaborative decision making approach in meetings with its stakeholders including airlines and Government agencies. Service quality improvements are assessed on a continuous basis. Initiatives undertaken during the year have included the following:

- The Aerodrome Emergency Plan is required by the Civil Aviation Authority to be tested (full practical exercise) at least two yearly. The main objectives of the exercise conducted November 2014 were to confirm draft procedures that have been refined over the past 18 months; test communications systems between agencies and between on-site locations; further familiarise staff (particularly on airport stakeholders,) with the Coordinated Incident Management System (CIMS). The exercise went well and all the training objectives were met.
- → With an increased Ebola threat in 2015, Health Authorities have been working closely with Airport Stakeholders to increase awareness and refine agreed response protocols. The Quarantine/Public Health response plan is being executed at WIAL. The purpose of this plan is to ensure a coordinated and appropriate response to potential outbreaks of contagious diseases at the airport. Ministry of Health Officials commenced screening at airports some time ago, with Customs Officials identifying those that have travelled to or from affected

areas, as well as Airlines taking an increased awareness of passengers who are ill in-flight. Since the introduction of measures put in place to monitor the threat from Ebola, Wellington Airport stakeholders have successfully managed a number of incidents in conjunction with Regional Public Health.

- WIAL recently implemented a new business continuity plan (BCP). While integrated with the Aerodrome Emergency Plan (AEP), the BCP outlines a separate set of processes to manage a significant disruption to normal business activity. The AEP deals with declared emergencies; the BCP is designed to manage business disruptions
- WIAL has upgraded its website for an improved and more intuitive user experience. The mobile site has also been redesigned during the year ensuring passengers have easy access to flight information and important announcements.
- A reliable IT network is one of the key pieces of airport infrastructure that is critical to the successful operation of an airport. WIAL has enhanced the capability, resilience and efficiency of our existing core network so that it has adequate capacity for current and future traffic requirements as well as resilience in the event of failure of one of its key components.
- WIAL has upgraded its CCTV platform to provide more extensive, high-resolution coverage to its various stakeholders to assist with operational matters.
- → Existing FID screens are progressively being refreshed with larger units to assist readability.
- WIAL continues to enhance travelers' experiences with innovative and well received installations. A new Smaug display in the Main Terminal Building was installed prior to the final movie in the Hobbit trilogy. These sculptures have elevated the airport's profile internationally through social and broadcast media coverage.

Disclosure Template Guidelines for Information Entry

Internal consistency check

OK

Templates

The templates contained in this workbook are intended to reflect the specified airport disclosure requirements set out in Schedules 1–17 inclusive and Schedule 23 of Commerce Commission decision 715 (Commerce Act (Specified Airport Services Information Disclosure) Determination 2010).

Data entry cells and calculated cells

Data entered into this workbook may be entered only into the data entry cells. Data entry cells are the bordered, unshaded areas in each template. Under no circumstances should data be entered into the workbook outside a data entry cell.

In some cases, where the information for disclosure is able to be ascertained from disclosures elsewhere in the workbook, such information is disclosed in a calculated cell. Under no circumstances should the formulas in a calculated cell be overwritten. All cells that are not data entry cells may be locked using worksheet protection to ensure they are not overwritten.

Validation settings on data entry cells

To maintain a consistency of format and to guard against errors in data entry, some data entry cells test entries for validity and accept only a limited range of values. For example, entries may be limited to a list of category names or to values between 0% and 100%.

Data entry cells for text entries

Data input cells that display the data validation input message "Short text entry cell" have a maximum text length of 253 characters. Because of page layout constraints, this text length is unlikely to be approached. The amount of text that may be entered in the comment boxes is restricted only by the capacity of the spreadsheet program and page layout constraints. Should a comment box within a template be inadequate to fully present the disclosed comments, comments may be continued outside the template. The comment box must then contain a reference to identify where in the disclosure the comment is continued. Row widths can be adjusted to increase the viewable size of text entries

A paragraph feed may be inserted in an entry cell by holding down both the {alt} and the {shift} keys.

Data entry cells that contain conditional formatting

A limited number of data entry cells may change colour or disappear from view in response to data entries (including date entries) made in the workbook. This feature has been implemented to highlight data being entered that is not internally consistent with other data currently entered, and to hide data entry cells for conditionally disclosed information when the determination does not require the data be disclosed.

a) Internal consistency checks

To assist with data entry, the shading of the following data entry cells will change if the cell content becomes inconsistent with data elsewhere in the template:

Schedule 4, cells N110:N118, J30; Schedule 7, cells K8:K14, K16:K18, K20, K22, K24, K26, K28, K30, K32.

Should such inconsistency be identified, the shading of the internal consistency check cell C4 at the top of the Guidelines worksheet will also change and the check cell will show "Error" instead of "OK".

b) Conditionally disclosed information

The determination allows in some circumstances that data do not need to be disclosed. Accordingly, the following cells are conditionally formatted to disappear from view (the borders are removed and the interior of the cells takes on the colour of the template background) in some circumstances Schedule 1, cells F9:F12, F14:F15, F17:F18, G9:G12, G14:G15, G17:G18;

In schedule 1, the column F cells listed above disappear if the determination does not require Part 4 disclosure in respect of year CY – 2 (CY is the current disclosure year). Similarly, the column G cells disappear if disclosure in not required in respect of year CY – 1.

Schedule 6 comparison of actual and forecast expenditures

Clause 6a of schedule 6 compares actual expenditures with expenditures forecast in respect of the most recent price setting event.

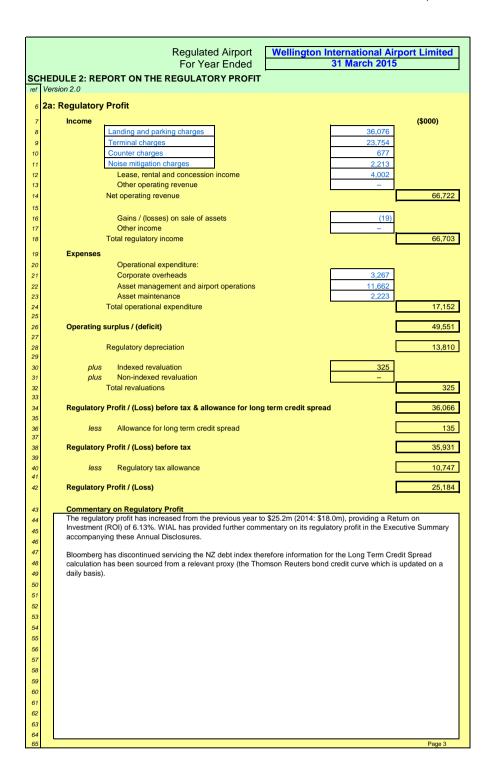

The calculated cells G10:G11, G14:G16, G19:G28 determine, from clause 6b, the forecast expenditure for the current disclosure year.

The calculated cells M10:M11, M14:M16, M19:M28 determine, from clause 6b, the forecast expenditure to date.

The formulas in the calculated cells assume that the current disclosure falls within the five year pricing period. Cell C65 notes which of the pricing period years disclosed in clause 6b coincides with the current disclosure year.

Total capital expenditure	13,299	38,416	(65.4%)	13,299	38,416	(65.4%)

Actual capital expenditure was below forecast in the year ended 31 March 2015 (2015) (\$13.3m actual compared to a forecast of \$38.4m). The main reason for the underspend is the delay in commencement of the Terminal South Extension (TSE) project. In addition, several projects are dependent on this project and consequently have also been delayed. WIAL remains committed to progressing each of the specified projects within PSE3 but was unable to do so during the year for the reasons noted below:

Capital Expenditure - Capacity Growth

Terminal South Extension

The majority of the actual capital expenditure in 2015 relates to the design and construction of the TSE project. The forecast for TSE was broken down into separate terminal and apron elements but these have subsequently been combined due to the interdependencies between the two elements of the project.

Capital expenditure for TSE was \$7.3m actual compared to \$16.4m across the two TSE key capital expenditure projects in the PSE3 forecast. This was mainly the result of the additional time taken to consult with airline stakeholders and partly due to time taken to procure the best contractor. Both of these steps will ensure a better outcome for all stakeholders. The project had been expected to enter the construction phase in August 2014 but construction actually began in December 2014 The total cost estimate for the project is still expected to be in line with the PSE3 forecast and the project is now expected to be completed by mid-2016.

North Terminal Development – Domestic Passenger Facilitation
The North Pier reconfiguration work was completed in January 2015 for \$1.6m actual compared to the \$2.0m forecast for the year.

Capital expenditure for LUMINS acquisitions was \$2.0m below forecast. The forecast provided for the acquisition of six houses, however acquisitions are dependent on home owners offering their properties for sale. Two properties were purchased by WIAL's noise mitigation subsidiary WANT Limited for \$0.9m in 2015, however as the buildings were removed and written off within the same year the building value is not included in the capital expenditure of \$0.4m.

Capital Expenditure - Asset Replacement and Renewal

Marine Protection

Capital expenditure was \$0.6m below forecast in 2015. The 2015 forecast included the manufacture and deployment of over 100 Akmons as part of a two year programme. The 2015 and 2016 forecast works have now been combined into a single project to take advantage of identified efficiencies. This project is now expected to commence in 2016.

Capital expenditure in 2015 was \$0.5m below forecast. The forecast included a provision for upgrading a substantial proportion of the asphalted areas to concrete hardstand, however this work has been deferred pending further pavement investigation works

Aprons

Capital expenditure in 2015 was \$0.8m below forecast. The forecast provided for expenditure on the Eastern Apron. The Eastern Apron works will now be addressed as part of the Southern Apron development design (within the TSE project) to enable the most efficient method of delivery.

Airport Companies must provide a brief explanation for any line item variance of more than 10%

* Disclosure year coincides with Pricing Period Starting Year + 0.

Explanation of Variances (continued)

Capital expenditure in 2015 was \$3.3m below forecast in 2015. The forecast provided for capital works to enhance stubway Bravo 8 and Bravo 9. This project has been delayed to align with other works associated with the TSE and Southern Apron projects and is now expected to commence in 2016. During 2015, WIAL completed work to realign and strengthen Taxiway Alpha 2. This work has resulted in reduced runway occupancy times, increased safety and improved taxiway strengthening.

Operational Compliance Works

Capital expenditure in 2015 was \$2.3m below forecast. This category included provision for upgrading the pedestrian subway. This project was completed well under the forecast budget of \$1.8m. This has increased the seismic rating of the subway and has enabled increased loadings for aircraft.

Other Airfield (including Clearway)
Capital expenditure in 2015 was \$1.8m below forecast in 2015. The Clearway project was completed earlier than expected in 2014, enabling increased payload for certain aircraft operating out of Wellington.

Other capital expenditure in 2015 included:

The planned upgrading of the CCTV system, core IT network upgrades and upgrade of WIAL's intranet. The variance to forecast is primarily due to timing differences where projects have commenced later than expected and also due to cost savings.

Operational Expenditure

Total operational expenditure for 2015 was \$17.2m compared to a forecast of \$18.8m. The variance of \$1.6m to forecast primarily relates to the expenditure for noise mitigation activities.

The PSE3 forecast assumed that a total of six properties would be acquired by WANT Ltd under the LUMINS programme, with an associated write-down of \$1.4m due to the disposal of the residential dwellings. As only two properties were purchased during 2015, the actual write-down and disposal costs were \$0.7m. In addition, \$0.4m in insulation expenditure was forecast for 2015 however this has yet to commence due to further testing of trial houses.

Commentary on Segmented Information

Specified Passenger Terminal and Airfield Activities

The segmented outcomes above produce ROI's of 5.0% (2014: 8.5%) for the specified passenger terminal activity and 7.4% (2014: 2.2%, 8.6% excluding the non-indexed revaluation) for the airfield activity. In WIAL's view, these returns are consistent with the forecast outcome from the price setting approach taken by WIAL for PSE3 after allowing for actual revaluations being lower than forecast.

Aircraft & Freight Activities

This segment produces an ROI of 4.7% (2014: 1.6%, 6.4% excluding the non-indexed revaluation). WIAL confirms that rental levels for individual tenants are established via commercially negotiated agreements, following receipt of advice from valuers and negotiations with tenants or prospective tenants. Valuers, in forming their advice establish commercial valuations of the properties which reflect their expectation of market rental levels.

ref Version 2.0

Fixed electrical ground power availability (if applicable)

57

55

58

78

The percentage of time that FEGP is unavailable due to interruptions* Disclosure of FEGP information applies only to airports where fixed electrical ground power is availab. 0.0065%

Commentary concerning reliability measures

Process for Determining Responsibility for Interruptions

WIAL maintains a database that records each breakdown in respect of the facilities recorded in Schedule 11. Each breakdown that occurs is then evaluated by WIAL's Manager Airport Performance to determine whether it meets the criteria for a reportable interruption. The assessment is undertaken in accordance with "Appendix C: Reliability Conditions for Disclosure" of the Information Disclosure (Airport Services) Reasons Paper published by the Commission on 22 December 2010.

The evaluation includes assessment of the party responsible for the interruption and may include discussions with airlines if airlines contributed to the cause of the interruption.

The number and duration of on time departure delays decreased during 2015 to 10 flights and a total duration of 3 hours and 30 minutes (2014: 16 flights and a duration of 7 hours and 51 minutes). It should be noted that 2 of these on-time departure delays were due to an airline's aircraft becoming immobilised on the runway. Of the remainder, the Baggage Handling System event caused delays to 7 aircraft in total, 4 aircraft (cumulative total of 1 hour and 20 minutes) related to one event that arose from a faulty stop switch which was only discovered during the recovery process from a routine stoppage; 2 aircraft were delayed when an emergency lanyard was pulled but could not be reset, and 1 aircraft was delayed when the baggage belt stopped working. The remaining event occurred when a ground handling agent damaged an in ground electrical socket preventing a ground power unit from being removed, consequently blocking the departure path of the aircraft it was used to service

Process to Consider Requirement for Operational Improvements

The interruptions are discussed with participants at the TEAM WLG meetings (an acronym for Together Everyone Achieves More). TEAM WLG continues to operate well and focuses on service reliability, service performance and a review of ASQ results, as well as airport collaborative decision making as a model for improving passenger and aircraft processing. During the year there were 3 meetings held. The meetings assist in confirming responsibility for interruptions and to consider whether process improvements are required.

Must include information on how the responsibility for interruptions is determined and the processes the Airport has put in place for undertaking any operational improvement in respec of reliability. If interruptions are categorised as "occurring for undetermined reasons", the reasons for inclusion in this category must be disclosed

Regulated Airport Wellington International Airport Limited For Year Ended 31 March 2015 SCHEDULE 12: REPORT ON CAPACITY UTILISATION INDICATORS FOR AIRCRAFT AND FREIGHT ACTIVITIES AND AIRFIELD **ACTIVITIES** Runwav #1 Runwav #2 Runway #3 Description of runway(s) Designations 16-34 Length of pavement (m) Width (m) 15 Shoulder width (m) Runway code 4E ILS category orv I [Select o Declared runway capacity VMC (movements per hour) 38-36 for specified meteorological IMC (movements per hour) condition Taxiway Taxiway #1 Taxiway #2 Taxiway #3 Description of main Main Name 20 taxiwav(s) 21 Length (m) 2.051 Width (m) 23 Status ngth 24 Number of links Aircraft parking stands Number of apron stands available during the runway busy day categorised by stand description and primary flight category 26 Contact stand-airbridge Contact stand-walking Remote stand-bus Air passenger services International 29 Domestic jet 30 Domestic turboprop Total parking stands 31 Busy periods for runway movements Date Runway busy day 14 November 2014 35 Runway busy hour start time (day/month/year hour) 12 Sep 2014 8 a.m. 36 Aircraft movements Number of aircraft runway movements during the runway busy day with air passenger service flights categorised by stand description and flight category Contact stand-airbridge Contact stand-walking Remote stand-bus Total Air passenger services 40 International 15 15 Domestic iet 84 84 Domestic turboprop 183 Total 99 183 282 45 Other (including General Aviation) 31 47 Total aircraft movements during the runway busy day Number of aircraft runway movements during the runway busy 50 hour 30 Commentary concerning capacity utilisation indicators for aircraft and freight activities and airfield activities Busy Day and Hour Information
WIAL commissioned Airbiz Limited (Airbiz) to provide advice on the technical information required to be disclosed by WIAL. Airbiz were also requested to determine the required busy hour and busy day statistics to be included in this Schedule. 54 55 56 WIAL's runway capacity varies depending on the direction of use of the runway (namely runway 16 or 34) and weather conditions. WIAL's busy hour demand was assessed at 30 57 movements per hour. The 30 movements is below available capacity in clear weather conditions (VMC conditions) but exceeds available capacity when weather conditions are poor (IMC conditions) 58 WIAL expects that the demand on runway availability will increase in the future as aircraft movements grow to accommodate the forecast increase in passengers. WIAL anticipates 59 that aircraft movements should not increase at the same growth rate as passengers because WIAL expects airlines to increase the average size of aircraft in their fleet.
WIAL is working with the airlines, Airways Corporation (Airways) and other stakeholders to implement measures to manage the prospective congestion to ensure appropriate changes 61 to facilities that could increase runway movement capacity are identified and implemented. In 2015, WIAL continued to work with stakeholders to deliver works which may increase runway capacity. This includes the initiative of Airport Collaborative Decision Making (ACDM). 62 WIAL implemented a new PSE3 price schedule for the pricing period 1. June 2014 to 31 March 2019. This is consistent with the pricing methodology developed for PSE2, including 63 peak period congestion pricing and parking charges to encourage the efficient use of facilities and scarce resources, incentivising aircraft operators to utilise runway slots in peak periods for the greatest number of passengers possible. Details of WIAL's pricing schedule and the rationale for this approach are set out in WIAL's Price Setting Event Disclosure for 64 65 PSE3 (available on WIAL's website www.wellingtonairport.co.nz). 66 WIAL has 12 aircraft stands available with aerobridge services. The 8 WIAL parking stands adjacent to the North Pier are swing gates and therefore available for international as well as domestic use. As the parking stand capacity data reported is for a busy day period we have included the North Pier aircraft gates as being available for both international and domestic aircraft. On the runway busy day there were no aerobridges out of service. 70

Commentary concerning capacity utilisation indicators for Passenger Terminal Activities

WIAL operates a common use terminal facility with areas directly provided to arriving or departing passengers where required by Customs border processing or Avsec security requirements. The utilisation data above reflects the use of the terminal by common use, international or domestic passengers as appropriate.

Passenger Data

WIAL commissioned Airbiz to provide passenger busy hour and day information required to be reported in this Schedule. Airbiz were provided with the aircraft movement and passenger data that WIAL received from Airways and its airlines for the year. Major airlines provided detailed information to WIAL on passenger numbers carried for each flight allowing an assessment of arriving and departing passengers on an hourly basis. Airbiz applied the adjustments per the Determination as required (i.e., the allowance for domestic transfer and transit passengers in the Check-in passenger throughput).

Baggage Reclaim

WIAL does not have the technical capacity at present to count bags processed by the baggage reclaim units. WIAL has used benchmarked information to calculate the assumptions for the number of bags carried per passenger:

- For international passengers an average of 0.7 bags for each international passenger; and
- For domestic passengers an average of 0.7 bags.
- These figures cover all passengers, including those who only travel with carry-on baggage.

WIAL has applied these assumptions in estimating the bags processed during the passenger busy hour.

Two baggage reclaim carrousels continue to be used as standard for international arrivals with carrousels being allocated to alternate flights to improve passenger distribution within the arrivals hall. This is facilitated by the use of moveable walls that temporarily extend the international arrivals hall. When international loadings are low however, only one reclaim carrousel is used.

Determination of Capacities

WIAL capacities were determined as follows:

- Airbiz were engaged to provide advice on all floor areas required to be reported in this Schedule. Airbiz developed the required measures from its review of building plans provided by WIAL.
- Baggage (outbound) capacities were advised by the system manufacturer, Glidepath, for the two baggage outbound units operated by WIAL and Avsec for the X-ray machine process capability.
 Passport control (outbound) advised by Airbiz following the receipt of Customs advice, namely 50 seconds per passenger processing time plus 5 seconds per
- Passport control (outbound) advised by Airbiz following the receipt of Customs advice, namely 50 seconds per passenger processing time plus 5 seconds per
 passenger allowance to move from queue to counter (for conventional counters) and 22 seconds per passenger processing time plus 5 seconds per passenger
 allowance to move from queue to gate (for SmartGates).
- Security screening advised by Airbiz following receipt of Aviation Security advice. Determined from number of screening stations multiplied by passengers per hour as advised by Avsec. International 2 stations at 270 passengers/hour and domestic 4 stations at 270 passengers/hour.
- Departure lounges number of seats determined by a physical count by WIAL operations staff. The numbers listed include general, food court and tenancy seats.
- Passport control (inbound) advised by Airbiz following receipt of Customs advice that for:
- o a conventional counter 50 seconds per passenger processing time plus 5 seconds per passenger allowance to move from queue to counter; and o a SmartGate biometric gate 22 seconds per passenger processing time plus 5 seconds per passenger allowance to move from queue to gate.
- Baggage reclaim the baggage system manufacturers, Glidepath, advised that the technical capacity of each baggage reclaim belt is 1,800 bags per hour derived from one bag per metre loaded onto the belt and a belt speed of 0.5m/s. The practical capacity is likely to be lower with baggage handlers unlikely to be able to load bags to this capacity and recirculating bags reducing available capacity for new bags to be loaded.
- Biosecurity screening and inspection and customs secondary inspection advised by Airbiz, based on practical capacity of 190 passenger per hour per screening station and the assumption that 50% of passengers are assessed.

Comment on Baggage (outbound) Utilisation

The utilisation statistic of 29% above provides the proportion of technical capacity that is utilised by bags loaded on the outbound baggage belts.

Terminal Floor Areas

WIAL has made some minor adjustments to the terminal floor space allocations in 2015 following a review of changes to the terminal during the year. These include the upgrades to the North Pier security and gate lounge area.

Average survey score		4.1	4.0	4.0	4.2	4.1

The margin of error requirement specified in clause 2.4(3)(c) of the determination applies only to the combined quarterly survey results for the disclosure year. Quarterly results may not conform to the margina of error requirement.

Commentary concerning report on passenger satisfaction indicators

WIAL operates a common use terminal facility with most of its facilities used by both domestic and international passengers. The survey outcomes of these facilities therefore reflect the survey views of the category of passengers rather than reflecting the service outcomes for separate terminals. The survey measures are reported on a scale with a maximum score of 5.

WIAL continues to rate highly in its ASQ scores, with an average domestic score of 4.1 and an average international score of 4.1 (based on those survey categories identified in Schedule 14) for 2015.

Domestic

Initiatives are underway to address the lower rated areas particularly in respect of the comfort of waiting/gate areas and availability of washrooms/toilets facilities. WIAL has now commenced the Terminal South Extension (TSE) project. This project will see improvements to the South and the South West Pier, including redesign of the departure gate lounges, and additional toilet facilities. Extra toilet facilities have also been added to the North Pier Gate Lounge. Also extra aircraft stands will be added (4 turbo prop stands and 1 jet stand). Refer to Schedule 15 for further detail.

International

International passengers were asked to provide a score for "ease of making connections with other flights". WIAL notes that there is generally insufficient passengers that connect from other flights to enable a statistically representative average score to be calculated by the ASQ programme managers. This occurrence is because passengers largely travel direct to/from Wellington airport. The ASQ programme managers did not provide an average score for any of the four quarters due to insufficient response. In 2013, WIAL received an on-going exemption from the Commission to not publish this score where it is not able to be provided by the ASQ programme managers.

Accuracy of Passenger Data to Prepare Utilisation Indicators

Refer to the comments in Schedule 13.

Location of Survey Fieldwork Documentation

The survey fieldwork documentation is available on WIAL's website www.wellingtonairport.co.nz.

Commentary must include an assessment of the accuracy of the passenger data used to prepare the utilisation indicators and the internet location of fieldwork documentation.

Disclosure of the operational improvement process

The Information Disclosure Determination requires WIAL to establish operational meetings with airlines to:

- Identify measures available to either reduce the likelihood of service losses which have caused significant disruption or on time delays from
 reoccurring; or to better manage the impact of service losses so as to reduce their impact;
- Confirm the responsibility for service interruptions as required; and
- Review quarterly passenger satisfaction surveys to identify where remedial action is required by the airport, airlines or border agencies. WIAL is committed to maintaining and improving service quality for its customers and enhancing the airport's facilities in response to customer feedback and changes in demand.

Service Quality Monitoring

<u>ASQ</u>

WIAL continued to obtain passenger feedback from the ASQ quarterly surveys and undertook a variety of meetings and communications with airlines and other parties to monitor the quality of WIAL's operations and to implement service and process improvements where required.

Team WLG Meetings

TEAM WLG meetings continued to be held in 2015, as detailed in Schedule 11. The TEAM WLG forum focuses on service reliability, service performance and a review of ASQ results, as well as airport collaborative decision making as a model for improving passenger and aircraft processing. During the year there were 3 meetings held. The meetings are supported by a TEAM WLG magazine. The latest issue has been circulated to 500 airport stakeholders and their staff.

ACDN

ACDM is an operational concept that is being advanced by the International Civil Aviation Organisation (ICAO), and is also supported by Airports Council International (ACI) and the International Air Transport Association (IATA). ACDM is about aviation partners working together more efficiently and transparently resulting in operational efficiencies and enhanced traffic capacity. WIAL has finalised the Solution Discovery & Design phase in order to create a clear understanding of exactly how A-CDM will work at WIAL with a direct link to process improvements. Airlines and ground handlers have been important stakeholders during this phase. Auckland Airport is currently implementing the first stage of ACDM, with WIAL to follow.

Other stakeholder engagement meetings at WIAL

In addition to TEAM WLG there are a number of other pre-set meetings with stakeholders which address the safety and service at Wellington airport:

- · Landside safety risk committee (meets 4 times a year)
- · Airside safety and risk committee (meets 4 times a year)
- Airspace user forum (meets 4 times a year)

A new forum which has recently started is the airline allocation meeting. In this meeting aircraft gate allocation and check-in desk allocation is being discussed and agreed. This meeting is initiated because more airlines are sharing WIAL's facilities and coordination on the use of common use terminal equipment is required.

Weekly meetings with stakeholders are being held for the Terminal South Extension project (see below). These meetings will ensure safe and efficient passenger processes during the construction stages of this major project.

Operational Improvement Initiatives

A number of specific initiatives were commenced or continued during the year. These included:

Terminal South Extension

The Terminal South Extension ("TSE") development incorporating a 35 metre (6000sqm) extension of the main terminal to the south and redesign and expansion of the south and south-west piers is well underway. The TSE project will double the width of both southern piers, provide extra gate lounge space, increase the retail mix, double the number of toilets and provide more parking spaces for aircraft. The TSE project is scheduled to be completed in mid-2016.

North Pier Reconfiguration

The North Pier gate lounge has been reconfigured in order to provide a better passenger experience. The size of the waiting lounge has doubled and the Avsec screening point has been repositioned to create more queueing space and a more efficient passenger flow. New public toilets have been added to the lounge after the security point, including disabled access.

WIAL Ambassadors Programme

WIAL has established a new airport volunteer program in conjunction with Positively Wellington Tourism ("PWT"). The primary function of the 50 ambassadors is to facilitate passenger movements by checking boarding passes, passports and departure cards and to provide direction and assistance. New information counters have been placed at both International Arrivals and Departures.

Pilot Briefing Package

WIAL has created a computer based briefing for new pilots flying into Wellington. Operational restrictions that have been in place for decades have been rescinded as a result of this new training package. The briefing comprises of informative text, audio, high resolution photos and videos of the approaches to Wellington. An assessment is included to confirm the trainee understands the content. The training package is innovative and more customer friendly for visiting operators and airlines. The content of the package has been developed in conjunction with the CAA Flight Inspectors. Many airlines have already used the new training package.

The process put in place by the Airport for it to meet regularly with airlines to improve the reliability and passenger satisfaction performance consistent with that reflected in the indicators.

Disclosure of the operational improvement process

Airside Operator Licensing and Airside Vehicle Permit

WIAL has implemented an Airside Operator Licensing (AOL) and Airside Vehicle Permit (AVP) scheme as part of the airport's Safety Management System. All operators on the airfield have to be licensed and their vehicles registered. The system helps the airport to vet and monitor companies whilst vastly reducing the administration time involved for both the airport and the applicant.

Taxiway Alpha 2 Realignment

WIAL has completed work to realign and strengthen Taxiway Alfa 2. This work has resulted in reduced runway occupancy times, increased safety and increased runway strength.

Pedestrian Subway

WIAL completed the strengthening of the pedestrian subway below the runway. This has increased the seismic rating of the subway and has enabled increased loadings for aircraft

Online Health and Safety Training

WIAL has implemented an online Health and Safety training package for all contractors working at the airport, including a presentation, several videos and a final online assessment to complete the training. A certificate is issued once questions are answered successfully.

Works Safety Officers

To ensure the TSE project is executed in a safe manner in a live operational environment close coordination between the project team, the contractor and the airfield operations team is of utmost importance. Three additional work safety officers (bringing WIAL's total WSO resources to four) have been recruited as part of the operations team to assist in ensuring that the TSE construction project is executed in a safe manner with minimal impact to airline operations.

Passenger Experience

WIAL continues to enhance travelers experience with innovative and well received installations. A new Smaug display in the Main Terminal Building was installed prior to the final move in the Hobbit trilogy. These sculptures have elevated the airport's profile internationally through social and broadcast media coverage.

Bi-Annual Exercise

The Aerodrome Emergency Plan is required by the Civil Aviation Authority to be tested (full practical exercise) at least two yearly. The main objectives of the exercise conducted November 2014 were to confirm draft procedures that have been refined over the past 18 months; test communications systems between agencies and between on-site locations; further familiarise staff (particularly on airport stakeholders,) with the Coordinated Incident Management System ("CIMS"). The exercise went well and all the training objectives were met.

Pandemic Emergency Response

With an increased Ebola threat in 2015, Health Authorities have been working closely with Airport Stakeholders to increase awareness and refine agreed response protocols. The Quarantine/Public Health response plan is being executed at WIAL. The purpose of this plan is to ensure a coordinated and appropriate response to potential outbreaks of contagious diseases at the airport. Ministry of Health Officials commenced screening at airports some time ago, with Customs Officials identifying those that have travelled to or from affected areas, as well as Airlines taking an increased awareness of passengers who are ill in-flight. Since the introduction of measures put in place to monitor the threat from Ebola, Wellington Airport stakeholders have successfully managed a number of incidents in conjunction with Regional Public Health

Emergency Management

WIAL recently implemented a new business continuity plan ("BCP"). While integrated with the Aerodrome Emergency Plan ("AEP"), the BCP outlines a separate set of processes to manage a significant disruption to normal business activity. The AEP deals with declared emergencies; the BCP is designed to manage business disruptions

Website (www.wellingtonairport.co.nz)

WIAL has upgraded its website for an improved and more intuitive user experience. The mobile site has also been redesigned during the year ensuring passengers have easy access to flight information and important announcements.

Core IT network upgrade

A reliable IT network is one of the key pieces of airport infrastructure that is critical to the successful operation of an airport. WIAL has enhanced the capability, resilience and efficiency of our existing core network so that it has adequate capacity for current and future traffic requirements as well as resilience in the event of failure of one of its key components.

CCTV Platform Upgrade

Wellington airport has upgraded its CCTV platform to provide more extensive, high-resolution coverage to its various stakeholders to assist with operational matters.

FIDS enhancements

Existing FID screens are progressively being refreshed with larger units to assist readability.

The process put in place by the Airport for it to meet regularly with airlines to improve the reliability and passenger satisfaction performance consistent with that reflected in the indicators.

32	Transition of the first terms of	ocultation which was comp	oted in Enhrupry 2012 for

WIAL's charges for the first two months of the year (from 1 April 2014 to 31 May 2014) were set as part of the PSE2 consultation which was competed in February 2012 for prices effective 1 April 2012 to 31 March 2017. In July 2013, WIAL announced that it would re-consult with its substantial customers, this led to new PSE3 prices being effective from 1 June 2014 to 31 March 2019. These charges apply for the last 10 months of the year (from 1 June 2014 to 31 March 2015). The Schedule of Charges for the PSE3 pricing period are available on WIAL's website (www.wellingtonairport.co.nz).

For the 2015 disclosures the aircraft weight and passenger statistics were derived from the Airways and airline data provided to WIAL as described in Schedule 16. WIAL's charges are set for each service to incentivise the efficient use of the services. These include:

- Airfield services a mix of aircraft weight and per passenger charges. Specified terminal services – per passenger charges.
- Aircraft parking time based charges. Check in facilities - time and occupied area based charges.

40

44

46

50

- Noise mitigation and insulation per passenger and aircraft charges.

Revenue from each of these charges has been grouped into each of the categories required in this Schedule. The average charges per tonne and passenger shown in the Schedule will therefore not correspond directly with WIAL's Schedule of Charges.

WIAL's average charge per international passenger and per tonne of aircraft weight demonstrate that the circumstances of each individual airport influence any direct comparison between airports. In particular:

· WIAL's total average charge per international passenger is between the average charges disclosed by Auckland and Christchurch airports in their 2014 Annual Disclosures.

· WIAL's average charge per tonne is considerably higher than those disclosed by both Auckland and Christchurch airports for jet aircraft. This is inconsistent with the average passenger charge and reflects the difference in the aircraft types using the three airports. In particular, both Auckland and Christchurch airports are serviced by wide body long haul aircraft which do not operate at WIAL. These aircraft have a significantly higher weight per passenger seat compared to the smaller aircraft operating at WIAL. This increases the relative volume of chargeable MCTOW and results in an average charge per tonne at Auckland and Christchurch airports that is below that at WIAL.

WIAL notes that it is continuing to progress commercial discussions with its major airlines to put in place a long term commercial contract to address the noise mitigation activities at the airport. It is currently proposed that the implementation of this contract would replace the noise mitigation or LUMINS charges currently set out in WIAL's Schedule of Charges. A commercial agreement will provide benefit to the airlines by smoothing out the cost of the noise mitigation programme over a longer period than the current 5 yearly aeronautical price resets, in line with the timeline for the noise mitigation programme.

The new Schedule of Charges implemented by WIAL from 1 June 2014 has been structured so that over the five year pricing period average revenue for each category of passenger will move closer to each other to reflect common use of the facilities. The change in charging approach will transition progressively over the five year period and will result in charges per international passenger decreasing and charges per domestic passenger increasing.

WIAL has adopted a pricing methodology designed to recover the cost of providing specified aeronautical services through charges which incentivise the efficient use of, and investment in, WIAL's assets in accordance with expert advice. This is consistent with the methodology adopted in PSE2 but with some enhancements to the methodology made to incorporate substantial customer feedback. Feedback was particularly relevant regarding the new charges implemented in PSE2 such as peak/shoulder charges and aircraft parking charges. Examples of price structure changes adopted for PSE3 are:

- A more gradual approach to the introduction of peak/shoulder charges; A reduction in the charges for check-in counter usage;
- A more gradual movement toward comparable charges per passenger across different aircraft types; and
- A relaxation of the times during which aircraft parking is payable.

These changes preserve WIAL's objective to encourage efficient use of WIAL's facilities but now also reflect the experience and learnings of PSE2 by incorporating modifications put forward by airlines to simplify the application of the price structure. Further comprehensive comment on WIAL's process, and methodology, to set prices for PSE3 is provided in the Price Setting Event Disclosure which is available on WIAL's website.

Commerce Act (Specified Airport Services Information Disclosure) Determination 2010 dated 22 December 2010

Schedule 20 - Certification for Disclosed Information

We, Tim Brown and Keith Sutton, being directors of Wellington International Airport Limited certify that, having made all reasonable enquiry, to the best of our knowledge, the following attached audited information of Wellington International Airport Limited prepared for the purpose of clauses 2.3(1) and 2.4(1) of the Commerce Act (Specified Airport Services Information Disclosure) Determination 2010, as amended in all material respects complies with that determination.

Tim Brown

Director 20 August 2015 **Keith Sutton**

Director 20 August 2015

Independent reasonable assurance report

To the directors of Wellington International Airport Limited

We have performed an engagement to provide reasonable assurance in relation to Schedules 1 to 17 for the regulatory year ended 31 March 2015 ('the Airport Disclosure Schedules'), prepared by Wellington International Airport Limited ('the Company') in accordance with the Commerce Act (Specified Airport Services Information Disclosure) Determination 2010 (the 'Determination').

Directors' responsibility for the Airport Disclosure Schedules

The Directors of the Company are responsible for preparation of the Airport Disclosure Schedules in accordance with the Determination, and for such internal controls as the directors determine is necessary to enable the preparation of Airport Disclosure Schedules that are free from material misstatement.

Auditor's responsibility

Our responsibility is to express an opinion to the directors on the preparation and presentation of the Airport Disclosure Schedules prepared in accordance with the Determination. In accordance with the Determination we owe a duty of care to the Commerce Commission and our engagement has been planned and performed in recognition of this duty of care.

We conducted our engagement in accordance with International Standard on Assurance Engagements 3000 Assurance Engagements Other Than Audits or Reviews of Historical Financial Information (ISAE (NZ) 3000) and Standard on Assurance Engagements 3100 Compliance Engagements (SAE 3100) issued by the External Reporting Board. These standards require that we comply with ethical requirements and plan and perform our engagement to provide reasonable assurance about whether the Airport Disclosure Schedules have been prepared in all material respects in accordance with the Determination.

An engagement to provide reasonable assurance involves performing procedures to obtain evidence about the amounts and disclosures in the Airport Disclosure Schedules. The procedures selected depend on the auditor's judgement, including the assessment of the risks of material misstatement of the Airport Disclosure Schedules, whether due to fraud or error. In making those risk assessments, we consider internal control relevant to the Company's preparation of the Airport Disclosure Schedules in order to design audit procedures that are appropriate in the circumstances, but not for the purpose of expressing an opinion on the effectiveness of the entity's internal control.

Partners and employees of our firm may deal with the Company on normal terms within the ordinary course of trading activities of the Company. We have provided financial statement audit services, other assurance services and taxation advice to the Company. These matters have not impaired our independence as defined in the Determination as auditors of the Company for this engagement. The firm has no other relationship with, or interest in, the Company.

Use of this report

This report has been prepared for the directors for the purpose of complying with the Commerce Act (Specified Airport Services Information Disclosure) Determination 2010 – Section 2.6. We disclaim any assumption of responsibility for any reliance on this report to any person other than the Directors, or for any other purpose than that for which it was prepared.

Scope and inherent limitations

Because of the inherent limitations of a reasonable assurance engagement, and the test basis of the procedures performed, it is possible that fraud, error or non-compliance may occur and not be detected. The opinion expressed in this report has been formed on the above basis.

As permitted by Clause 2.6(3) of the Determination we have relied on records that have been sourced from a third party in respect of certain non-financial information. For these items, our procedures were limited to confirming that the information in the Airport Disclosure Schedules agreed to the third party records provided to us.

Our reasonable assurance engagement provides assurance that the forecast information included in the disclosures required by Schedule 6 of the Determination has been extracted from the forecast information prepared by the Company and used in the latest price setting event with the airlines. However, to avoid doubt, it does not provide assurance that forecast information was accurate or reasonable or achievable, or that it subsequently proved to be accurate. We have no obligation to update our report for any subsequent changes that affect forecast information.

Opinion

In our opinion:

- Subject to clause 2.6(3) and as far as appears from an examination of them, proper records to enable the complete and accurate compilation of the Airport Disclosure Schedules have been kept by the Company and the Airport Disclosure Schedules are based on these records;
- The disclosure information in Schedules 1 to 17 complies, in all material respects, with the Determination;
- The historical financial information in Schedules 1 to 10 pursuant to clause 2.3(1) of the Determination has been prepared, in all material respects, in accordance with the Determination; and,
- Subject to clause 2.6(3), the non-financial information in Schedules 11 to 17 pursuant to clause 2.4(1) of the Determination complies, in all material respects, with the Determination.

We have obtained all the information and explanations we have required.

Our engagement was completed on the 20th of August 2015 and our opinion is expressed as at that date.

Wellington
