

# **WELLINGTON INTERNATIONAL AIRPORT LIMITED**

# SPECIFIED AIRPORT SERVICES ANNUAL INFORMATION DISCLOSURE

FOR THE YEAR ENDING 31 MARCH 2013

# **Executive Summary**

## 1. Introduction

Wellington International Airport Limited (**WIAL**) provides its Annual Disclosure and reporting of financial and service quality outcomes for the year ended 31 March 2013. This is WIAL's third Annual Disclosure under the Commerce Act information disclosure regime (**ID Regime**) which commenced following the publication of the Commerce Commission's Information Disclosure Determination in December 2010 (**Determination**).

WIAL recognises that the purpose of information disclosure, as provided in the Commerce Act (Act), is for WIAL to provide sufficient information to enable interested persons to assess WIAL's performance over time and in comparison to Auckland International Airport Limited (AIAL) and Christchurch International Airport Limited (CIAL).

WIAL considers that the ability of the Commerce Commission (**Commission**) and interested persons to assess WIAL's performance will improve over time as further information disclosures are published.

WIAL looks forward to feedback from the Commission on this and previous years disclosures.

# 2. Return on Investment

WIAL's actual return on investment is set out in Schedule 1 of the Annual Disclosures. The return over the last three years has been as follows:

Year	WIAL's Post Tax Return on Investment	WIAL's Return on Investment excluding Revaluations	Commission's 75 <sup>th</sup> %ile Cost of Capital Published for WIAL	Impact on Revenue per annum	Cumulative Impact on Revenue <sup>(1)</sup>
2011	6.16%	5.14%	9.18%	\$17.2 million shortfall	\$20.1 million shortfall
2012	6.91%	5.44%	8.73%	\$10.4 million shortfall	\$31.3 million shortfall
2013	6.23%	5.43%	8.04%	\$10.5 million shortfall	\$41.9 million shortfall

(1) SHOWN IN 2013 PRESENT VALUE TERMS

The return on investment is calculated in accordance with the Determination by dividing the regulatory return, including CPI indexed asset revaluations and revaluations from updated land revaluations, by the regulatory investment value (comprising the commencing asset base plus an allowance for additions and disposals during the year).

As shown in the table above, the actual returns for 2013 and all years since the commencement of the ID Regime are below the cost of capital determinations released by the Commission for WIAL.

The revenue shortfalls in the table demonstrate that WIAL is not earning excessive profits and in fact is currently earning revenues well below the levels that would be derived from applying the Commission's input methodologies (**IMs**).

# 3. Service Quality and Investment

WIAL is committed to providing an appropriate quality of service to all users of its airports services, undertaking investment and initiatives to address any areas of inadequate quality or concern and to facilitate passenger growth in future years.

WIAL continues to rate highly in its ASQ (**Airport Service Quality**) survey scores, with an average domestic score of 4.0 and an average international score of 4.1 for 2013. These compare extremely well against other airports around the world and WIAL is currently ranked the 3rd highest airport in Australasia and in the top quartile in its worldwide peer group of airports with 5 to 15 million passengers per annum.

WIAL continues to consult with its airline customers and other stakeholders on operational matters. In 2011 WIAL established a forum for airport stakeholders, namely TEAM WLG an acronym for Together Everyone Achieves More. TEAM WLG continues to meet monthly and focuses on service reliability, service performance including a review of ASQ results, as well as airport collaborative decision making as a model for improving passenger and aircraft processing. The meetings also assist in confirming responsibility for service interruptions and to consider whether process improvements are required.

In Schedule 15, WIAL comments on a number of initiatives that have been completed or are currently in progress to deliver further improvements in service quality. These include the following:

- The International Departure Fee at WIAL was removed from 1 April 2012 following the introduction of WIAL's new charges for the period 1 April 2012 to 31 March 2017 (PSE2). This has meant that passengers are no longer required to pay a separate departure fee prior to entering the international departures lounge, therefore improving the efficiency of processing times for international departing passengers and improving passenger service.
- The new car park and precinct layout is well under way, with improved drop off and pick up facilities, and is scheduled for substantial completion at the end of August 2013.
- Throughout the year phase one of the taxi relocation and layout has been completed with the implementation of the new taxi waiting area which includes improved facilities for drivers.
- The Terminal South Extension (TSE), which includes the design and expansion of the South West Pier (SWP) and associated apron and other works. The design phase for the TSE is currently in progress but is later than originally forecast. This delay was mainly due to extended airline consultation as set out in Schedule 6. WIAL notes that if completion of these projects is not achieved within a reasonable time period versus forecast then a wash up arrangement may apply as set out in consultation for PSE2.

The main benefits of these capital works will be to improve terminal capacity and passenger amenity, improve departure lounges together with improved baggage handling capability and improved toilet facilities. These enhancements are in part due to the introduction of larger A320 aircraft in New Zealand.

- In response to the outcomes in the ASQ surveys and other feedback received, WIAL has
  completed a significant upgrade of the public toilet facilities on Level 1 of the Main Terminal
  Building and plans to address the waiting/departure gate lounge congestion as part of the
  TSE.
- Extension and improvement of the departure lounge at Gate 21.
- The installation of rear boarding stairs and vestibules to enable dual boarding (back and front doors) was requested by Air New Zealand and Jetstar for A320 operations. These works have been ongoing and were completed for Gate 22 in 2013.
- Mid-life refurbishment of the aerobridge on Gate 21 was completed in 2013. By ensuring a
  consistency of aerobridge functionality, this further enhances the airline's ability to maintain on
  time performance and efficiency.
- Ongoing improvements to the Baggage Handling System (BHS) including new safety enhancements.
- A new Airside Access Gate was operational in the year and included repositioning of the Cabin Services Gate from Freight Drive in late 2012. This new gate will provide improved airside access, efficiencies and security.
- The Ministry of Primary Industries (**MPI**) introduced a direct entry option to the international arrivals processing area in late 2012. This initiative permits MPI officials to direct certain New Zealand citizens to the arrivals exit without the further need for biosecurity intervention, thus speeding up processing times and reducing queues at the X-ray machines.
- As a result of queue monitoring and agency processing rates, the location of New Zealand Customs (Customs) emigration desks and the Avsec screening points were reversed at the entry to the international departures lounge in May 2012. This change provides a more spacious queuing area for X-ray screening, and allows passengers the ability to return to the main terminal area, such as to return any designated liquids, aerosol and gels (LAGS) material which would otherwise have been confiscated by Avsec staff at the X-ray screening point.
- During the year WIAL further developed its new website to ensure that flight information and gate lounge details were upfront and easy to access, along with contact details for customer service, feedback and maps. In late 2012 WIAL also developed a mobile phone website that displays direct flight and gate information. Mobile phone access of flight information now accounts for well over 20% of website usage.
- Upgrading the Flight Information Display system (FIDs) design to enhance the ability for passengers to find their flight times and departure gates.

WIAL also continually reviews the quality of service it provides to its passengers and customers including commissioning of passenger surveys and through a collaborative decision making approach in meetings with its stakeholders including airlines and Government agencies. Service quality improvements to address identified concerns are undertaken on a continuous basis. Initiatives undertaken during the year have included the following:

 Baggage Delivery: TEAM WLG identified an improvement to the FIDs which indicates to passengers when their bag is expected to arrive. In parallel, the system will record the performance of baggage delivery by the ground handler measuring the time between the arrival of the aircraft and delivery of the first and last bag.

- Queues at Domestic Screening: The processes were assessed and timing adjustments made
  to the way passengers were instructed to go to the gate lounge as well as the time prior to
  boarding that the Avsec screening point was staffed. Barriers were installed to better manage
  foot traffic and the lounge area was increased at Gate 21. This multi-agency effort resulted in
  passenger queues being reduced dramatically.
- Queues at International Secondary Screening: The processes were assessed and adjustments were made with all the agencies involved in international arrivals processing and baggage delivery. Two baggage reclaim carrousels are now used as standard for international arrivals with carrousels being allocated to alternate flights to spread the passenger distribution within the arrivals hall. New queuing barriers were installed and the screening point for MPI direct entry adjusted to negate all passengers having to queue, with only those passengers assessed as being of higher risk directed to the X-ray or search area. WIAL operations staff now also actively assist with queue management in this area. This has reduced the queuing time considerably for most arriving international passengers.
- International Diversions: From time to time, international flights are diverted from Christchurch or Auckland to Wellington. Passengers on board these flights were previously required to reembark their aircraft due to regulatory requirements concerning separation of arrival and departing passengers. TEAM WLG members reviewed the processes involved and developed a solution whereby affected passengers are now treated as passengers in transit. Airline security programmes were adjusted to take into account the revised processing protocols so that passengers may remain in the international departure lounge at the same time as processing of other international departures, until either being cleared by Customs and MPI as a normal arrival or re-boarding their flight to their original destination.

Further initiatives reviewed and undertaken by WIAL in the year included:

- Reducing the incidence of aerobridge malfunctions: To reduce the incidence of operator error, a standardised training package has been developed for aerobridge operation. Furthermore access card readers were installed at the aerobridge so that only selected authorised personnel can access the aerobridge.
- Aerobridge refurbishment: A number of aerobridges have recently undergone significant refurbishment. An aerobridge was reinstalled, in conjunction with external passenger stairs to the apron, to enable airlines the choice of embarking passengers via the aerobridge or via the apron and mobile stairs to the aircraft (rear stair boarding).
- Baggage system faults: A significant number of daily faults were recorded with the BHS arising
  from the incorrect presentation of passenger bags on the conveyor belt system. This mostly
  arose from the self-service baggage drop facility. Pictorial signs were installed showing how
  bags should be presented at the baggage drop area for guidance to staff and passengers. This
  has reduced the incidence of bag read errors and improved the smooth running of the BHS.

# 4. Contact Person

In the case of any queries, the contact person for this disclosure is:

# Disclosure Template Guidelines for Information Entry

Internal consistency check

OK

#### Templates

The templates contained in this workbook are intended to reflect the specified airport disclosure requirements set out in Schedules 1–17 inclusive and Schedule 23 of Commerce Commission decision 715 (Commerce Act (Specified Airport Services Information Disclosure) Determination 2010).

#### Data entry cells and calculated cells

Data entered into this workbook may be entered only into the data entry cells. Data entery cells are the bordered, unshaded areas in each template. Under no circumstances should data be entered into the workbook outside a data entry cell.

In some cases, where the information for disclosure is able to be ascertained from disclosures elsewhere in the workbook, such information is disclosed in a calculated cell. Under no circumstances should the formulas in a calculated cell be overwritten. All cells that are not data entry cells may be locked using worksheet protection to ensure they are not overwritten.

#### Validation settings on data entry cells

To maintain a consistency of format and to guard against errors in data entry, some data entry cells test entries for validity and accept only a limited range of values. For example, entries may be limited to a list of category names or to values between 0% and 100%.

#### Data entry cells for text entries

Data input cells that display the data validation input message "Short text entry cell" have a maximum text length of 253 characters. Because of page layout constraints, this text length is unlikely to be approached. The amount of text that may be entered in the comment boxes is restricted only by the capacity of the spreadsheet program and page layout constraints. Should a comment box within a template be inadequate to fully present the disclosed comments, comments may be continued outside the template. The comment box must then contain a reference to identify where in the disclosure the comment is continued.

Row widths can be adjusted to increase the viewable size of text entries.

A paragraph feed may be inserted in an entry cell by holding down both the {alt} and the {shift} keys.

#### Data entry cells that contain conditional formatting

A limited number of data entry cells may change colour or disappear from view in response to data entries (including date entries) made in the workbook. This feature has been implemented to highlight data being entered that is not internally consistent with other data currently entered, and to hide data entry cells for conditionally disclosed information when the determination does not require the data be disclosed.

a) Internal consistency checks
To assist with data entry, the shading of the following data entry cells will change if the cell content becomes inconsistent with data elsewhere in the template:

Schedule 4, cells N110:N118, J30; Schedule 7, cells K8:K14, K16:K18, K20, K22, K24, K26, K28, K30, K32.

Should such inconsistency be identified, the shading of the internal consistency check cell C4 at the top of the Guidelines worksheet will also change and the check cell will show "Error" instead of "OK".

### b) Conditionally disclosed information

The determination allows in some circumstances that data do not need to be disclosed. Accordingly, the following cells are conditionally formatted to disappear from view (the borders are removed and the interior of the cells takes on the colour of the template background) in some circumstances:

Schedule 1, cells F9:F12, F14:F15, F17:F18, G9:G12, G14:G15, G17:G18; In schedule 1, the column F cells listed above disappear if the determination does not require Part 4 disclosure in respect of year CY – 2 (CY is the current disclosure year). Similarly, the column G cells disappear if disclosure in not required in respect of year CY - 1

#### Schedule 6 comparison of actual and forecast expenditures

Clause 6a of schedule 6 compares actual expenditures with expenditures forecast in respect of the most recent price setting event.

The calculated cells G10:G11, G14:G16, G19:G28 determine, from clause 6b, the forecast expenditure for the current disclosure year.

The calculated cells M10:M11, M14:M16, M19:M28 determine, from clause 6b, the forecast expenditure to date.

The formulas in the calculated cells assume that the current disclosure falls within the five year pricing period. Cell C65 notes which of the pricing period years disclosed in clause 6b coincides with the current disclosure year.

31 32	Commentary Asset Transfers				
33	Several changes of asset use occurred in 2013 and the asset transfers ("Assets acq	uired from a related p	arty" above) represent	adjustments to the ass	set base to recognise
34	these changes. The major components of the assets transferred into the regulated a	asset base were as fo	llows:	•	-
35 36	Relocation of WIAL's corporate office to an area on the second floor of the Main Te	rminal Building (MTB)	. This area was previo	usly recorded as a cor	nmercial asset and
37	therefore not included in the Regulatory Asset Base (RAB). A share of the corporate	office asset value is	apportioned to the aero	nautical asset base.	
38 39	Conversion of an area in the MTB formerly used for landside duty free retail, but is	now a passenger wait	ing area and partly app	ortioned to the aerona	utical asset base.
40	Asset Disposals				
41 42	In 2013, a number of houses adjoining the airport perimeter on Bridge Street were so remains within the aeronautical asset base. The buildings were sold at market value				n retained and
43	Terrain's within the aeronautical asset base. The buildings were sold at market value	and are recorded as	asset disposais in the	year.	
44 45	Two of the Bridge Street properties were acquired and disposed of within 2013 and of				
46	required. This calculation presumes that all assets disposed of are included in the or revaluation is determined. This is not correct for the two Bridge Street properties according to the two Bridge Street				
47	not been deducted from the opening RAB value in the calculation of the indexed revi	aluation.		·	
48 49	Cost Allocation Adjustment				
50	WIAL's allocation methodology for the allocation of common assets to regulated and				
51 52	methodology is detailed in Schedule 9. While the methodology is unchanged the all base during the year.	ocation factors, such a	as floor area, were ame	nded as a result of cha	anges to the asset
53	base daining the year.				
54					
	* The 'unallocated RAB' is the total value of those assets used wholly or partially to provide specified services v	vithout any allowance being	made for the allocation of co	sts to non-specified services	s. The RAB value
55	represents the value of these assets after applying this cost allocation. Neither value includes land held for future			Sp 30m0d 00. Vi000	
56	† RAB to correspond with the total assets value disclosed in schedule 9 Asset Allocations.

8 670

# Capital Expenditure - Capacity Growth

Actual capital expenditure was substantially below forecast. WIAL remains committed to progressing each of the specified projects but was unable to do so efficiently during 2013 for the reasons noted below.

8,670

The main variance is in relation to the proposed capital works for the Terminal South Extension (TSE), South West Pier (SWP) and associated apron and other works -\$0.6m (actual) compared to \$7.6m (forecast). The design phase for the TSE is currently in progress. The concept design (consistent with the 2030 Master Plan) for extension and the redesign of the SWP was circulated to stakeholders for comment in January 2011. This consultation was expected to take 6 months, however as a result of their feedback in November 2011 a revised concept design document was not issued until May 2012.

Detailed consultation with Air New Zealand concerned the redevelopment of the initial phase of these works, comprising the Southern Apron. WIAL's proposed design to enhance the apron capacity and efficiency included a key requirement that turboprop aircraft would be pushed back from aircraft gates, rather than powering out as currently occurs. Consultation took a longer period of time than WIAL forecast in pricing consultation and consequently the Southern Apron project was not commenced in 2013. WIAL considered that the push back of turboprops was required to optimise the efficient use of WIAL's constrained apron layout and space. Initially there was some concern that push back was not possible but it was confirmed that push back is in operation at other airports worldwide for turboprops and the aircraft manufacturer also confirmed that this is permissible. The next stage is detailed design of the terminal building.

The delay in commencement of this project has led to a consequent delay in the majority of the other capacity growth projects as design of the requirements for each of these is linked to the apron design. Consequently only minimal expenditure was incurred on the following projects:

- MTB Development Stage 1 (Baggage Hall) (\$0.6m actual, \$6.7m forecast)
   Baggage Hall Stage 2 (\$0.1m actual, \$0.3m forecast)
- MTB Development Stage 2 (Terminal Extension) (\$20k actual, \$0.4m forecast)
- SWP Redevelopment (\$26k actual, \$1.0m forecast)

WIAL notes that if completion of these projects is not achieved within a reasonable time period of forecast then a wash up arrangement may apply as set out in consultation for PSE2. This arrangement would result in WIAL providing a pricing credit in the next pricing period.

The remaining capacity growth project which shows actual expenditure below forecast is the MTB Development - Stage 1A (Toilet Refurbishment) project. This project has now been completed (in the first quarter of 2014). The project forecast also included monies for development of temporary facilities during the construction period and for refurbishment of Level 0 toilets. Neither of these were required - it is currently expected that the Level 0 toilet refurbishment is included in the TSE project.

# Capital Expenditure - Asset Replacement and Renewal

The main project variances are as follows:

- Sea Protection Structures (\$0.2m below forecast) upgrade of the Breakwater at the Southern end of the runway was delayed. It is now underway and will be completed
- Gates (\$0.3m below forecast) the forecasted expenditure was for enhancement of gates surrounding the South and South West piers. This work was deferred until after resolution of the Southern Apron project design referred to above. This scheduling of works is appropriate as otherwise WIAL risks incurring expenditure unnecessarily if it is not undertaken in a manner consistent with the larger apron design project.
- · Aprons (\$0.3m below forecast) some miscellaneous works were completed however the main forecast provision was for expenditure on the Eastern apron. This project • Other Airside Works (\$0.7m below forecast) - the forecast expenditure included a project to review the layout of the trolley bus wires at the Northern end of the runway.
- This work was deferred pending further work on the prospective runway extension.
- Movement Areas (\$0.3m above forecast) capital works to enhance stubway Brayo 9 were brought forward into 2013. WIAL considered that early completion of these works enhances the efficient use of the runway.
- Fire rescue and operating appliances (\$2.2m below forecast) the forecast provided for the replacement of two fire appliance vehicles in 2013. This did not occur due to a longer than anticipated tender process. The appliances have now been purchased and are scheduled for delivery by the end of 2013.

(61.5%)

96

106

• LUMINS property acquisitions (\$0.6m below forecast) - the forecast provided for the acquisition of seven houses during 2013. However, this acquisition is dependent on home owners offering their property for sale to WIAL and only two houses were offered for sale.

• Other capital works - a number of works forecast for 2013 did not occur or completion was delayed until 2014. The most significant of these projects were:

- Information technology (\$1m below forecast) whilst a large number of projects were achieved several were still in progress at the end of 2013 or delayed until 2014 for operational reasons. These included the planned enhancement of WIAL's data warehouse, implementation of gate allocation software, upgrading of the CCTV system and upgrade of the safety management software. The safety management software is now in operation (since June 2013). The CCTV and gate allocation projects are now underway in 2014.
- The forecast provided for aerobridges 16 and 17 to be upgraded (\$0.5m). These upgrades are now planned for 2014.
   Modest enhancements for the North Pier have been postponed pending consideration of the optimum utilisation of the MTB.
- The forecast included provision for the installation of Movement Area Guidance Signage (MAGS) to assist pilot guidance (\$0.8m). This expenditure is dependent on an Airways led project which was commenced in 2013 and is still in progress.
- A provision for the installation of additional fire hydrants was not utilised due to the delay in resolution of the Southern Apron design (\$0.6m).
- WIAL's 2030 Master Plan identified the long term requirement for further land to be acquired in Coutts Street, Rongotal. No properties were offered for sale by their

These projects were partly offset by two projects that were not included in WIAL's forecast:

- Relocation of the corporate office for WIAL with a transfer to the RAB of a share of the assets for the new office location (transfer value \$2.1m); and
- Existing assets for a passenger waiting area in the main terminal hall which was formerly used as a retail area and excluded from the RAB (\$0.8m).

## Operational Expenditure - Asset Management and Airport Operations

Expenditure is below forecast due to cost reductions from three main sources:

- "Cost Out" Programme passenger numbers were below forecast in the early part of 2013. As a consequence, WIAL instituted a cost management programme to manage essential and non-essential expenditure. This resulted in the saving and deferral of certain expenditure, provided that safety or service quality levels were not compromised. This included repairs and maintenance and service expenditure and WIAL expects to incur much of the deferred expenditure in 2014, in addition to the
- normal forecast maintenance requirements for that year.

   Insurance WIAL achieved a significant saving during its 2012 insurance renewal (\$0.3m). This was possible due to improved insurance market conditions following the
- Christchurch earthquakes and strong competition between insurance brokers.

   LUMINS the forecast provided for a loss on disposal of certain Bridge Street houses as part of WIAL's noise mitigation initiatives. The forecast provided for WIAL to acquire and dispose of seven houses in 2013 (\$0.5m), in addition to the disposal of properties already owned by WIAL. Whilst all the properties owned by WIAL were sold, only two of the seven forecast properties were purchased and disposed. This acquisition is dependent on owners approaching WIAL to purchase their property.

#### Operational Expenditure - Asset Maintenance

This cost reduction was primarily due to WIAL's "Cost Out" programme noted above where certain non-essential expenditure was deferred. Again, this was provided that safety or service quality levels were not compromised and WIAL expects to incur much of the deferred expenditure in 2014, in addition to the normal forecast maintenance requirements for that year.

Airport Companies must provide a brief explanation for any line item variance of more than 10%

#### Regulated Airport **Wellington International Airport Limited** For Year Ended 31 March 2013 SCHEDULE 11: REPORT ON RELIABILITY MEASURES (cont) Version 2.0 Fixed electrical ground power availability (if applicable) The percentage of time that FEGP is unavailable due to interruptions\* \* Disclosure of FEGP information applies only to airports where fixed electrical ground power is available. 56 57 Commentary concerning reliability measures Process for Determining Responsibility for Interruptions 58 59 WIAL maintains a database that records each breakdown for the facilities recorded in Schedule 11. Each breakdown that occurs is then evaluated by 60 WIAL's Manager Airport Performance to determine whether they meet the criteria for a reportable interruption. The assessment is undertaken in 61 accordance with "Appendix C: Reliability Conditions for Disclosure" of the Information Disclosure (Airport Services) Reasons Paper published by the 62 Commission on 22 December 2010. 63 The evaluation includes assessment of the party responsible for the interruption and may include discussions with airlines if airlines contributed to the 64 cause of the interruption. 66 The number and duration of on time departure delays reduced in 2013 to 2 flights and a duration of 1 hour and 14 minutes (2012: 6 flights and a duration 67 of 2 hours and 23 minutes). 68 69 **Process to Consider Requirement for Operational Improvements** The interruptions are discussed with participants at the TEAM WLG meetings (refer also to Schedule 15) which were held monthly in 2013. TEAM WLG 70 is an acronym for Together Everyone Achieves More, and is a forum for airport stakeholders which was established, and first met in April 2011. 72 TEAM WLG focuses on service reliability, service performance and a review of ASQ results, as well as airport collaborative decision making as a model 73 for improving passenger and aircraft processing. The meetings assist in confirming responsibility for interruptions and to consider whether process 74 improvements are required. The meetings also provide an opportunity for collaborative decision making on the nature and timing of major capital 75 projects, thus improving the quality of capital spending. 76 77 Must include information on how the responsibility for interruptions is determined and the processes the Airport has put in place for undertaking any operational improvement in respect of reliability. If interruptions are categorised as "occurring for undetermined reasons", the reasons for inclusion in this category must be disclosed

Commentary concerning capacity utilisation indicators for Passenger Terminal Activities

WIAL operates a common use terminal facility with areas directly provided to arriving or departing passengers where required by Customs border processing or Avsec security requirements. The utilisation data above reflects the use of the terminal by common use, international or domestic passengers as appropriate.

WIAL commissioned Airbiz to provide passenger busy hour and day information required to be reported in this Schedule. Airbiz were provided with the aircraft movement and passenger data that WIAL received from Airways and its airlines for the year. Major airlines provided detailed information to WIAL on passenger numbers carried for each flight allowing an assessment of arriving and departing passengers on an hourly basis. Airbiz applied the adjustments per the Determination as required (i.e., the allowance for domestic transfer and transit passengers in the Check-in passenger throughput).

#### Baggage Reclaim

WIAL does not have the technical capacity at present to count bags processed by the baggage reclaim units. WIAL has used benchmarked information to calculate the assumptions for the number of bags carried per passenger

- For international passengers an average of 0.7 bags for each international passenger; and
- For domestic passengers an average of 0.7 bags.
- These figures cover all passengers, including those who only travel with carry-on baggage

WIAL has applied these assumptions in estimating the bags processed during the passenger busy hour.

As noted in Schedule 15, two baggage reclaim carrousels are now used as standard for international arrivals with carrousels being allocated to alternate flights to improve passenger distribution within the arrivals hall. This is facilitated by the use of moveable walls that temporarily extend the international arrivals hall.

WIAL capacities were determined as follows:

- Airbiz were engaged to provide advice on all floor areas required to be reported in this Schedule. Airbiz developed the required measures from its review of building plans provided by WIAL.
- Baggage (outbound) capacities were advised by the system manufacturer, Glidepath, for the two baggage outbound units operated by WIAL and Avsec for the X-ray machine process capability.

  • Passport control (outbound) - advised by Airbiz following the receipt of Customs advice, namely 30 seconds per passenger processing time plus 5 seconds per
- passenger allowance to move from queue to counter (for conventional counters) and 27 seconds per passenger processing time plus 5 seconds per passenger allowance to move from queue to gate (for SmartGates).
- Security screening advised by Airbiz. Determined from number of screening stations multiplied by passengers per hour as advised by Avsec. International 2 stations at 220 passengers/hour and domestic - 4 stations at 275 passengers/hour.
- Departure lounges number of seats determined from physical count by WIAL operations staff. There was no new seating installed in the current year other than temporary seating in the Cube area outside International Departures.

  • Passport control (inbound) - advised by Airbiz following receipt of Customs advice that for:
- o a conventional counter 50 seconds per passenger processing time plus 5 seconds per passenger allowance to move from queue to counter; and
- Baggage reclaim the baggage system manufacturers, Gildepath, advised that the technical capacity of each baggage reclaim belt is 1,800 bags per hour derived from one bag per metre loaded onto the belt and a belt speed of 0.5m/s. The practical capacity is likely to be lower with baggage handlers unlikely to be able to load bags to this capacity and recirculating bags reducing available capacity for new bags to be loaded.
- Biosecurity screening and inspection and customs secondary inspection advised by Airbiz, based on practical capacity of 300 passenger per hour per screening station and the assumption that 20% of passengers are assessed.

# Comment on Baggage (outbound) Utilisation

The utilisation statistic of 26% above provides the proportion of technical capacity that is utilised by bags loaded on the outbound baggage belts. WIAL notes that it is experiencing congestion in other parts of the process to handle outbound baggage which means that practical capacity is below the technical capacity. Limiting factors include a lack of storage space in the baggage sortation hall to hold bags taken off the baggage belt and possible limitations in airline resources to take bags off the baggage belts.

WIAL completed some enhancements to the baggage handling facilities during the year, primarily operational improvements.

WIAL is also consulting with airlines on further enhancement of the baggage hall and associated facilities. This enhancement may also be required to accommodate the proposed upgrading of the Avsec screening machines scheduled for 2014.

# Terminal Floor Areas

WIAL has made adjustments to the terminal floor space allocations in 2013 following a detailed review with Airbiz. The adjustments comprise:

- An increase in Landside Circulation (inbound and outbound) and a decrease in Check-in due to the surrender of an Air New Zealand and Virgin check-in counters which slightly overlapped into circulation space.
- A minor adjustment to Airside Circulation (outbound) to allocate further space leading to the aerobridge at Gate 28.
- A minor adjustment to International Departure Lounges (outbound) to remove a small area that is occupied by vending machines and is therefore allocated to commercial
- · A minor adjustment to Airside Circulation (inbound) to allocate further space leading from the aerobridge at Gate 28 to the arrivals ramp.

Commentary must include an assessment of the accuracy of the passenger data used to prepare the utilisation indicators

For functional components which are normally shared by passengers on international and domestic aircraft

Average survey score		4.3	3.9	4.3	4.0	4.1

4.1

The margin of error requirement specified in clause 2.4(3)(c) of the determination applies only to the combined quarterly survey results for the disclosure year. Quarterly results may not conform to the margin of error requirement.

# Commentary concerning report on passenger satisfaction indicators

WIAL operates a common use terminal facility with most of its facilities used by both domestic and international passengers. The survey outcomes for these facilities therefore reflect the survey views of the category of passengers rather than reflecting the service outcomes for separate terminals. The survey measures are reported on a scale with a maximum score of 5.

WIAL continues to rate highly in its ASQ scores, with an average domestic score of 4.0 and an average international score of 4.1 for 2013.

Service enhancements undertaken or underway that respond to some of the survey outcomes are detailed in Schedule 15.

Initiatives are underway to address the lower rated areas particularly in respect of the washroom and comfort of waiting/departure gate areas. In 2013, WIAL upgraded the toilet facilities on Level 1 of the Main Terminal Building. WIAL has also been consulted with its major stakeholders with regard to the TSE project, which includes improvements to the SWP, redesign of the departure gate lounges, improved baggage handling capability and additional toilet facilities. WIAL has been consulting with its major airlines for over 12 months on this project and is currently finalising the design phase of these developments in conjunction with its airlines and other stakeholders. Refer to Schedule 15 for further detail.

# International

International passengers were asked to provide a score for "ease of making connections with other flights". WIAL notes that there were insufficient responses for two of the four quarterly surveys in 2013 as there were insufficient passengers that connected from other flights to enable a statistically representative average score to be calculated by the ASQ programme manager DKMA. This occurrence is because passengers largely travel direct to/from WIAL. DKMA therefore did not provide an average score for this survey question in these quarters, and the average survey score for these quarters is adjusted to exclude this measure.

WIAL has received an exemption from the Commission to not publish this score where it is not able to be provided by DKMA.

# Accuracy of Passenger Data to Prepare Utilisation Indicators

Refer to the comments in Schedule 13.

# Location of Survey Fieldwork Documentation

The survey fieldwork documentation is available on WIAL's website www.wellingtonairport.co.nz.

Commentary must include an assessment of the accuracy of the passenger data used to prepare the utilisation indicators and the internet location of fieldwork documentation.

# Disclosure of the operational improvement process

During 2013 WIAL continued to focus on maintaining and improving service quality for its customers and enhancing WIAL's facilities to respond to customer feedback and changes in demand. WIAL continued to obtain passenger feedback from the ASQ quarterly surveys and undertook a variety of meetings and communications with airlines and other parties to monitor the quality of WIAL's operations and to implement service and process improvements where required.

# Service Quality Monitoring Undertaken by WIAL

The service quality monitoring and operational improvement processes undertaken by WIAL in 2013 are detailed below:

- ASQ quarterly surveys of passengers for 2013 as detailed in Schedule 14. In response to the outcomes in the ASQ surveys and other feedback received, WIAL has completed a significant upgrade of the public toilet facilities on Level 1 of the Main Terminal Building and plans to address the waiting/departure gate lounge congestion as part of the TSE.
- Airline consultation and discussions are ongoing. The most significant capital consultation during 2013 was in relation to the proposed TSE and SWP extension. The design phase for the TSE is currently in progress and the status of the capital consultation is set out in Schedule 6. This work is required in part following an increase in passenger volumes due to the introduction of the A320s which has increased waiting/departure gate lounge congestion. The TSE design also accommodates more than double the existing toilet capacity and to undertake refurbishment of the toilets on Level 0.
- Monthly TEAM WLG meetings are being held in 2013, which as detailed earlier focus on service reliability, service performance and a review of ASQ results, as well as airport collaborative decision making as a model for improving passenger and aircraft processing.
- The 2030 Master Plan was issued as a final document in January 2010 after over 18 months of consultation with airport stakeholders. The Master Plan identified that efficient use of WIAL's highly constrained site is imperative to accommodate forecast growth in passengers and aircraft movements. It continues to fulfil a number of requirements, including:
- A road map or guide for investment by WIAL and other stakeholders;
- A planning strategy for input into local, regional and national plans; and
- A platform for stakeholder and community engagement.

To ensure that the Master Plan remains current WIAL has committed to reviewing this at least every five years. Consequently WIAL has now commenced work on its next Master Plan with the target of finalising the plan around mid-2014.

- WIAL commenced capital works on its car park and precinct roading in 2013. This was undertaken following the commissioning of a number of surveys and studies regarding landside vehicle access and drop off facilities. These concluded that kerb drop off was at or near capacity and identified that the previous system was inefficient in part due to a significant portion of non-airport vehicles using the airport as a thorough fare.
- The SKIDATA car park system continues to be enhanced to enable WIAL to better understand customer profiles, peak demand requirements and congestion. This system provides data for all visitors to the airport as well as travelling passengers.
- WIAL commenced discussions with Airways in mid-2011 concerning the implementation of an Airport Collaborative Decision Making (ACDM) system, as an extension to their Air Traffic Management Collaborative Arrivals Manager system. An ACDM project was initiated in March 2012, facilitated by Airways and incorporates airports and airlines at a national network level. WIAL is an active participant in this forum. ACDM is primarily used to make management of aircraft more efficient, but also to maximise available terminal and airspace capacity, improve on time performance and reduce aircraft fuel burn. The nationwide project was temporarily suspended while Airways undertook major restructuring of its business, but has now recommenced. During this hiatus period WIAL undertook further assessment of its Airport Operations Database to be used as a local platform for ACDM, and conducted software upgrades and further enhancements which will underpin the data required as part of the information sharing process.

# Service Quality Enhancements Implemented following Surveys and Feedback from Customers

A number of specific initiatives were commenced or continued during the year. These included:

- The International Departure Fee at WIAL was removed from 1 April 2012; with the introduction of WIAL's new Schedule of Charges effective on that date. This has meant that passengers are no longer required to pay a separate departure fee prior to entering the International departures lounge, therefore improving the efficiency of processing times for international departing passengers and improving passenger service. This action was taken in response to feedback received from passengers and similar developments at other airports.
- The new car park and precinct layout is well under way and scheduled for substantial completion in August 2013. This will provide a number of service improvements:
- Significantly increase the drop off and pick up facilities;
- Provide taxi and public vehicle streams for more efficient drop off;
- Significantly shorten the route to the drop-off by providing vehicle access direct to the terminal;
- Remove non-airport traffic from the drop off area to promote safety and efficiency;
- Improve safety for all traffic flows; and
- Provide improved way finding signage.
- TSE development including redesign and expansion of the SWP. The cost of the project is included in the capital expenditure forecasts for PSE2 and is scheduled to be undertaken in 2013 and 2014.
- Extension and improvement of the departure lounge at Gate 21.
- The installation of Rear Boarding Stairs and Vestibules to enable dual boarding (back and front doors) was requested by Air New Zealand and Jetstar for A320 operations. These works were completed for Gate 22 in 2013. The construction of direct access to the terminal from these aircraft gates enhances the operators ability to achieve on time performance and improves gate efficiency by enabling more aircraft types to utilise the gates (which were previously exclusively for jet operations).
- Mid-life refurbishment of the aerobridges on Gate 21 was completed in 2013. By ensuring a consistency of aerobridge functionality, this further enhances operator's ability to maintain on time performance and efficiency.
- Ongoing improvements of the Baggage Handling System (BHS) including safety enhancements.

133 134

- · WIAL is in consultation with Avsec and its airlines, working collaboratively to programme and deliver a schedule of replacement of new Hold Baggage Screening Explosive Detection X-ray equipment. Due for completion by the end of 2013, the project allows for WIAL's baggage handling operations to remain European Civil Aviation Conference (ECAC) compliant and allows for a continued level of efficiency of the BHS.
- · In conjunction with Airways, WIAL has worked to facilitate the optimal location of the proposed new control tower which replaces its old tower and provides Airways with an improved location. Design commenced during the reporting period and construction is targeted for completion in mid-2015.
- · As part of the ongoing development of the airport, WIAL has scheduled the removal of certain buildings on the Western Apron, returning some of the building area to apron space to encourage its use by small and private operators who are currently utilising the Eastern Apron. This will enable more efficient use of the Eastern Apron.
- The new Airside Access Gate was constructed in 2013 and included repositioning of the Cabin Services Gate from Freight Drive in late
- 2012. This new gate will provide improved airside access, efficiencies and security.

   The Ministry of Primary Industries (MPI) introduced a direct entry option to the International Arrivals processing area in late 2012. This initiative permitted MPI officials to direct certain New Zealand citizens to the arrivals exit without the further need for Biosecurity intervention, thus speeding up processing times and reducing queues at the X-ray machines.
- As a result of queue monitoring and agency processing rates, the location of Customs emigration desks and the Avsec screening points were reversed at the entry to the international departures lounge in May 2012. This change provides a more spacious queuing area for X-ray screening, and allows passengers the ability to return to the main terminal area, such as to return any designated liquids, aerosol and gels (LAGS) material which would otherwise have been confiscated by Avsec staff at the X-ray screening point.

## Requirement for Process Improvement

The Information Disclosure Determination requires WIAL to establish operational meetings with airlines to:

- · Identify measures available to either reduce the likelihood of service losses which have caused significant disruption or on time delays from reoccurring; or to better manage the impact of service losses so as to reduce their impact;
- · Confirm the responsibility for service interruptions as required; and
- Review quarterly passenger satisfaction surveys to identify where remedial action is required by the airport, airlines or border agencies.

As noted in Schedule 11, TEAM WLG was established, and first met in April 2011. The forum focuses on service reliability, service performance and review of ASQ results, as well as airport collaborative decision making as a model for improving passenger and aircraft processing. During the year there were 10 meetings held.

During 2013, TEAM WLG have reviewed and made improvements in the following areas:

- Baggage Delivery: ASQ results indicated that passenger perception for baggage delivery at WIAL was below average. However, there was no reliable system to verify this or to assess whether the short walking distance to the arrivals carrousel contributed to this perception. As a consequence TEAM WLG instigated the BIC (Baggage Input Console) project. This project identified an improvement to the Flight Information Displays (FIDs) which now indicates to passengers when their bag is anticipated to arrive. In parallel, the system will record the performance of baggage delivery by the ground handler measuring time between the arrival of the aircraft and delivery of the first bag and the last bag
- Queues at Domestic Screening: Although reported in a positive light in the ASQ surveys there was evidence of at times lengthy queues leading into some domestic security screening points. The processes were assessed and timing adjustments made to the way passengers were instructed to go to the gate lounge as well as the time prior to boarding that the Avsec screening point was staffed. Barriers were installed to better manage foot traffic and the lounge area was increased at Gate 21. This multi-agency effort resulted in passenger queues being reduced dramatically
- · Queues at International Secondary Screening: Although shown in a positive light in the ASQ surveys there was evidence of at times lengthy queues at the international secondary processing area upon arrival. The processes were assessed and adjustments were made with all the agencies involved in international arrivals processing and baggage delivery. Two baggage reclaim carrousels are now used as standard for international arrivals with carrousels being allocated to alternate flights to spread the passenger distribution within the arrivals hall. New queuing barriers were installed and the screening point for MPI direct entry adjusted to negate all passengers having to queue, with only those passengers assessed as being of higher risk directed to the X-ray or search area. WIAL operations staff now also actively assist with queue management in this area. This has reduced the queuing time considerably for most arriving international passengers.
- · LAGS: A high number of LAGS were being confiscated at the international screening point. A concerted effort was made by TEAM WLG members in drawing attention to the LAGS requirements at terminal concessionaires and the food court area where bottled water was being sold. There was a noted positive effect as a result of this initiative.
- International Diversions: From time to time, international flights are diverted from Christchurch or Auckland to Wellington. Passengers aboard these flights are often required to re-embark their aircraft due to regulatory requirements concerning separation of arrival and departing passengers. TEAM WLG members reviewed the processes involved and developed a solution whereby affected passengers are now treated as passengers in transit. Airline security programmes were adjusted to take into account the revised processing protocols so that passengers may remain in the international departure lounge at the same time as processing of other international departures, until either being cleared by Customs/MPI as a normal arrival or re-boarding their flight to their original destination.

Other initiatives reviewed and undertaken by WIAL included:

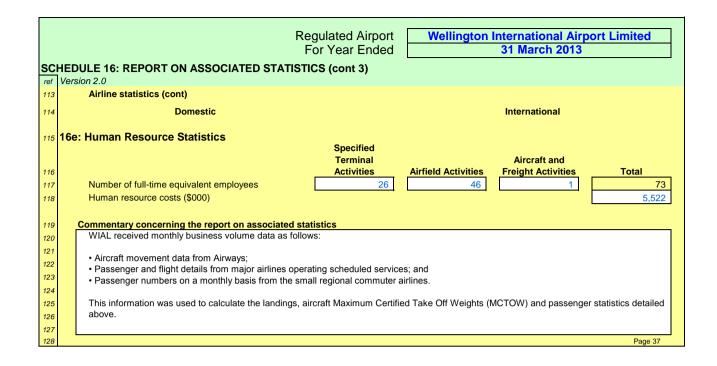

- · Reducing the incidence of aerobridge malfunctions: To reduce the incidence of operator error, a standardised training package has been developed for aerobridge operation. Furthermore access card readers were installed at the aerobridge so only selected authorised personnel can access the aerobridge cab. Future competency testing will be linked to the ability to access the aerobridge and activate the controls.
- · Aerobridge refurbishment: A number of aerobridges have recently undergone significant refurbishment. This included dismantling the aerobridges and transporting them off-site to undertake the refurbishment programme. The aerobridge was reinstalled in conjunction with external passenger stairs to the apron to permit airlines the choice of embarking passengers via the aerobridge or via the apron and mobile stairs to the aircraft (rear stair boarding).
- · Baggage system faults: A significant number of daily faults were recorded with the BHS arising from the incorrect presentation of a passenger bag on the conveyor belt system. This mostly arose from the self-service baggage drop facility. Pictorial signs were installed showing how bags should be presented at the baggage drop area for guidance to staff and passengers. This has reduced the incidence of bag read errors and improved the smooth running of the BHS.

The process put in place by the Airport for it to meet regularly with airlines to improve the reliability and passenger satisfaction performance consistent with that reflected in the

Regulated Airport Wellington International Airport Limited For Year Ended 31 March 2013 SCHEDULE 17: REPORT ON PRICING STATISTICS 17a: Components of Pricing Statistics Net operating charges from airfield activities relating to domestic flights of 3 tonnes or more but less than 30 tonnes MCTOW 3,292 Net operating charges from airfield activities relating to domestic flights of 30 tonnes MCTOW or more 20.077 Net operating charges from airfield activities relating to international flights 11.099 Net operating charges from specified passenger terminal activities relating to domestic passengers 23.714 Net operating charges from specified passenger terminal activities relating to international passengers 12 4.047 of passengers Number of domestic passengers on flights of 3 tonnes or more but less than 30 tonnes MCTOW 1.549.817 Number of domestic passengers on flights of 30 tonnes MCTOW or more 3 002 613 Number of international passengers 726,742 Total MCTOW (tonnes) Total MCTOW of domestic flights of 3 tonnes or more but less than 30 tonnes MCTOW 381.520 Total MCTOW of domestic flights of 30 tonnes MCTOW or more 870.635 2 Total MCTOW of international flights 22 17b: Pricing Statistics Average charge Average charge (\$ per tonne MCTOW) (\$ per passenger) Average charge from airfield activities relating to domestic flights of 3 tonnes or more but less than 30 tonnes MCTOW 8.63 Average charge from airfield activities relating to domestic flights of 30 tonnes MCTOW or more 6.49 23.06 Average charge from airfield activities relating to international flights 27 15.27 49.27 Average charge Average charge (\$ per domestic (\$ per international passenger) passenger) Average charge from specified passenger terminal activities 5.57 29 5.11 Average charge Average charge (\$ per domestic (\$ per international passenger) passenger) Average charge from airfield activities and specified passenger terminal activities 10.14 20.84 31 Commentary on Pricing Statistics WIAL's charges for 2013 are detailed in WIAL's Schedule of Charges (available on WIAL's website www.wellingtonairport.co.nz). The aircraft weight and passenger statistics were derived from the Airways and airline data provided to WIAL as described in Schedule 16 WIAL's charges are set for each service to incentivise the efficient use of the services. These include: · Airfield services - a mix of aircraft weight and per passenger charges Specified terminal services – per passenger charges. Aircraft parking – time based charges. Check in facilities – time and occupied area based charges. Noise mitigation and insulation – per passenger and aircraft charges. 43 Revenue from each of these charges has been grouped into each of the categories required in this Schedule. The average charges per tonne and passenger shown in the Schedule will therefore not correspond directly with WIAL's Schedule of Charges. The new schedule of charges implemented by WIAL from 1 April 2012 has been structured so that over the five year pricing period average revenue for each category of passenger will become similar to reflect common use of the facilities. This distinguishes from the previous approach for the PSE1 pricing period where charges were distinguished between groups of passengers. The change in charging approach will transition progressively over the five year 47 period and will result in charges per international passenger decreasing and charges per domestic passenger increasing. The redesign of WIAL's charging structure has resulted in some changes in the average revenues per tonne and passenger from those disclosed in prior vears with key impacts as follows: · Airfield charge per international passenger - this has increased from prior years disclosures reflecting the intention in PSE2 to recover NPV=0 for the airfield activity. This objective was not sought in PSE1 with revenues for airfield activities not producing a required return (this was compensated by an over recovery in the terminal activity such that the return was recovered overall). Terminal charges per international passenger - this decreased substantially following removal of the international departure fee and realignment of the NPV recoveries as explained above.

• Airfield charge per tonne of landed weight - this increase is again due to the realignment of the NPV recovery for airfield activities. 5 The total revenue per international passengers decreased from prior years while the total revenue per domestic passengers increased. This reflects the 50 transitioning of the charges in PSE2 which will result in passengers paying similar charges to reflect their use of WIAL's facilities. 60 WIAL's average charge per international passenger and per tonne of aircraft weight demonstrate that the circumstances of each individual airport influence 6 any direct comparison between airports. In particular: 62 63 WIAL's total average charge per international passenger is between the average charges disclosed by Auckland and Christchurch airports in 2012. 64 • WIAL's average charge per tonne is considerably higher than those disclosed by both Auckland and Christchurch airports for jet aircraft. This is inconsistent with the average passenger charge and reflects the difference in the aircraft types using the three airports. In particular, both Auckland and 6 Christchurch airports are serviced by wide body long haul aircraft which do not operate at WIAL. These aircraft have a significantly higher weight per 67 passenger seat compared to the smaller aircraft operating at WIAL. This increases the relative volume of chargeable MCTOW and results in an average charge per tonne at Auckland and Christchurch airports that is below that at WIAL. 68 WIAL notes that it is continuing to hold commercial discussions with its major airlines to put in place a long term commercial contract to address the noise mitigation activities at the airport. It is currently proposed that the implementation of this contract would replace the noise mitigation or LUMINS charges currently set out in WIAL's Schedule of Charges. 72

# Commerce Act (Specified Airport Services Information Disclosure) Determination 2010 dated 22 December 2010

# Schedule 20 - Certification for Disclosed Information

We, David Newman and Keith Sutton, being directors of Wellington International Airport Limited certify that, having made all reasonable enquiry, to the best of our knowledge, the following attached audited information of Wellington International Airport Limited prepared for the purpose of clauses 2.3(1) and 2.4(1) of the Commerce Act (Specified Airport Services Information Disclosure) Determination 2010 in all material respects complies with that determination.

**David Newman** 

Director 11 July 2013 **Keith Sutton**Director

11 July 2013

# Independent reasonable assurance report

# To the directors of Wellington International Airport Limited

We have performed an engagement to provide reasonable assurance in relation to Schedules 1 to 17 for the regulatory year ended 31 March 2013 ('the Airport Disclosure Schedules'), prepared by Wellington International Airport Limited ('the company') in accordance with the Commerce Act (Specified Airport Services Information Disclosure) Determination 2010 (the 'Determination').

# **Directors' responsibility for the Airport Disclosure Schedules**

The directors of the company are responsible for preparation of the Airport Disclosure Schedules in accordance with the Determination, and for such internal controls as the directors determine is necessary to enable the preparation of Airport Disclosure Schedules that are free from material misstatement.

# Auditor's responsibility

Our responsibility is to express an opinion to the directors on the preparation and presentation of the Airport Disclosure Schedules prepared in accordance with the Determination. In accordance with the Determination we owe a duty of care to the Commerce Commission and our engagement has been planned and performed in recognition of this duty of care.

We conducted our engagement in accordance with International Standard on Assurance Engagements 3000 Assurance Engagements Other Than Audits or Reviews of Historical Financial Information (ISAE (NZ) 3000) and Standard on Assurance Engagements 3100 Compliance Engagements (SAE 3100) issued by the External Reporting Board. These standards require that we comply with ethical requirements and plan and perform our engagement to provide reasonable assurance about whether the Airport Disclosure Schedules have been prepared in all material respects in accordance with the Determination.

An engagement to provide reasonable assurance involves performing procedures to obtain evidence about the amounts and disclosures in the Airport Disclosure Schedules. The procedures selected depend on the auditor's judgement, including the assessment of the risks of material misstatement of the Airport Disclosure Schedules, whether due to fraud or error. In making those risk assessments, we consider internal control relevant to the company's preparation of the Airport Disclosure Schedules in order to design audit procedures that are appropriate in the circumstances, but not for the purpose of expressing an opinion on the effectiveness of the entity's internal control.

Partners and employees of our firm may deal with the company on normal terms within the ordinary course of trading activities of the company. We have provided financial statement audit services, other assurance services and taxation advice to the company. These matters have not impaired our independence as defined in the Determination as auditors of the company for this engagement. The firm has no other relationship with, or interest in, the company.

# Use of this report

This report has been prepared for the directors for the purpose of complying with the Commerce Act (Specified Airport Services Information Disclosure) Determination 2010 – Section 2.6. We disclaim any assumption of responsibility for any reliance on this report to any person other than the Directors, or for any other purpose than that for which it was prepared.

# **Scope and inherent limitations**

Because of the inherent limitations of a reasonable assurance engagement, and the test basis of the procedures performed, it is possible that fraud, error or non-compliance may occur and not be detected. The opinion expressed in this report has been formed on the above basis.

As permitted by Clause 2.6(3) of the Determination we have relied on records that have been sourced from third parties in respect of certain non-financial information. We have also relied on the independent expert valuer who has prepared a Market Value Alternative Use land valuation in accordance with the Determination. For these items, our procedures were limited to confirming that the information in the Airport Disclosure Schedules agreed to the third party records provided to us.

Our reasonable assurance engagement provides assurance that the forecast information included in the disclosures required by Schedule 6 of the Determination has been extracted from the forecast information prepared by the company and used in the latest price setting event with the airlines. However, to avoid doubt, it does not provide assurance that forecast information was accurate or reasonable or achievable, or that it subsequently proved to be accurate or achievable. We have no obligation to update our report for any subsequent changes that affect the forecast information.

# **Opinion**

In our opinion:

- Subject to clause 2.6(3) and as far as appears from an examination of them, proper records to enable the complete and accurate compilation of the Airport Disclosure Schedules have been kept by the company and the Airport Disclosure Schedules are based on these records;
- The disclosure information in Schedules 1 to 17 complies, in all material respects, with the Determination;
- The historical financial information in Schedules 1 to 10 pursuant to clause 2.3(1) of the Determination has been prepared, in all material respects, in accordance with the Determination; and
- Subject to clause 2.6(3), the non-financial information in Schedules 11 to 17 pursuant to clause 2.4(1) of the Determination complies, in all material respects, with the Determination.

We have obtained all the information and explanations we have required.

Our engagement was completed on 11 July 2013 and our opinion is expressed as at that date.

Wellington
